Preface to the second edition	vii
Preface to the first edition	viii
<b>Introduction: Some historical markers</b>	<b>1</b>
The work of Hadamard on geodesics . . . . .	1
The works of Menger and Wald . . . . .	5
The works of Busemann and Alexandrov . . . . .	8
Convexity . . . . .	12
<b>1 Lengths of paths in metric spaces</b>	<b>15</b>
1.1 The length of a path . . . . .	16
1.2 Arclength as parameter . . . . .	24
1.3 Differentiable paths in Euclidean space . . . . .	26
1.4 The space of paths . . . . .	29
Notes on Chapter 1 . . . . .	35
<b>2 Length spaces and geodesic spaces</b>	<b>40</b>
2.1 Length spaces . . . . .	41
2.2 Geodesics . . . . .	56
2.3 Limits of geodesics . . . . .	62
2.4 Geodesic spaces . . . . .	64
2.5 Geodesic convexity . . . . .	76
2.6 Menger convexity . . . . .	78
Notes on Chapter 2 . . . . .	85
<b>3 Maps between metric spaces</b>	<b>88</b>
3.1 $K$ -Lipschitz maps and $K$ -length-non-increasing maps . . . . .	89
3.2 Non-expanding maps . . . . .	91
3.3 Distance non-decreasing maps . . . . .	96
3.4 Local isometries . . . . .	98
3.5 Covering spaces . . . . .	105
Notes on Chapter 3 . . . . .	109
<b>4 Distances</b>	<b>111</b>
4.1 The Hausdorff distance . . . . .	113
4.2 The Busemann–Hausdorff distance . . . . .	118
4.3 Closed limits of subsets . . . . .	120
4.4 Metrics on the isometry group . . . . .	127
Notes on Chapter 4 . . . . .	132

<b>5</b>	<b>Convexity in vector spaces</b>	135
5.1	Affinely convex subsets . . . . .	135
5.2	Convex hull . . . . .	141
5.3	Convexity in normed vector spaces . . . . .	146
5.4	Limits and spaces of convex sets . . . . .	151
5.5	Minkowski's construction . . . . .	154
5.6	The Hilbert geometry . . . . .	158
5.7	Perpendicularity in Hilbert geometry . . . . .	167
	Notes on Chapter 5 . . . . .	171
<b>6</b>	<b>Convex functions</b>	176
6.1	Convex functions . . . . .	177
6.2	Convex functions of one variable . . . . .	186
	Notes on Chapter 6 . . . . .	192
<b>7</b>	<b>Strictly convex normed vector spaces</b>	194
7.1	Strictly convex normed vector spaces . . . . .	194
7.2	Uniquely geodesic spaces . . . . .	196
7.3	Inner products and $L^p$ norms . . . . .	201
	Notes on Chapter 7 . . . . .	202
<b>8</b>	<b>Busemann spaces</b>	203
8.1	Busemann spaces . . . . .	203
8.2	Local geodesics in Busemann spaces . . . . .	212
8.3	Geodesic convexity in Busemann spaces . . . . .	214
8.4	Convex functions on Busemann spaces . . . . .	215
	Notes on Chapter 8 . . . . .	219
<b>9</b>	<b>Locally convex spaces</b>	226
9.1	Locally convex spaces . . . . .	227
9.2	Variation of local geodesics . . . . .	235
9.3	The universal covering of a locally convex metric space . . . . .	240
	Notes on Chapter 9 . . . . .	244
<b>10</b>	<b>Asymptotic rays and the visual boundary</b>	246
10.1	Asymptotic rays . . . . .	247
10.2	The visual boundary . . . . .	252
	Notes on Chapter 10 . . . . .	256
<b>11</b>	<b>Isometries</b>	258
11.1	Minimal displacement, minimal sets and the isometry types . . . . .	259
11.2	Axial isometries . . . . .	268
11.3	Periodic geodesics . . . . .	271

11.4 Axial isometries of Busemann spaces . . . . .	274
11.5 Parallel lines . . . . .	276
Notes on Chapter 11 . . . . .	278
<b>12 Busemann functions, co-rays and horospheres</b>	<b>280</b>
12.1 Busemann functions . . . . .	280
12.2 Co-rays . . . . .	284
12.3 Horospheres . . . . .	288
Notes on Chapter 12 . . . . .	292
Bibliography	293
Index	305
