Preface	v
1 Elements of homology theory	1
1.1 Categories and functors	1
1.2 Some geometric properties of \mathbb{R}^N	4
1.3 Chain complexes	7
1.4 Homology groups of a simplicial complex	10
1.5 Simplicial maps	13
1.6 Induced homomorphisms of homology groups	17
1.7 Degrees of maps between manifolds	18
1.8 Applications of the degree of a map	23
1.9 Relative homology	32
1.10 The exact homology sequence	33
1.11 Axiomatic point of view on homology	37
1.12 Digression to the theory of Abelian groups	39
1.13 Calculation of homology groups	41
1.14 Cellular homology	43
1.15 Lefschetz fixed point theorem	47
1.16 Homology with coefficients	50
1.17 Elements of cohomology theory	53
1.18 The Poincaré duality	58
2 Elements of homotopy theory	61
2.1 Definition of the fundamental group	61
2.2 Independence of the choice of the base point	63
2.3 Presentations of groups	65
2.4 Calculation of fundamental groups	68
2.5 Wirtinger's presentation	72
2.6 The higher homotopy groups	74
2.7 Bundles and exact sequences	76
2.8 Coverings	79
Answers, hints, solutions	83
Bibliography	95
Index	97
