Preface	vii
Introduction	1
1 Local regularity and approximation theory	9
1.1 Maximum principle and approximation	9
1.2 A priori L^∞ -bounds for slow diffusion	15
1.3 Harnack inequality for slow diffusion	23
1.4 Local L^∞ -bounds for fast diffusion	28
1.5 Equicontinuity of solutions	33
1.6 Existence of weak solutions	52
2 The Cauchy problem for slow diffusion	58
2.1 Pointwise estimates and existence of initial trace	58
2.2 Uniqueness of solutions	60
2.3 Existence and blow up	66
2.4 Proof of Pierre's uniqueness result	68
2.5 Further results	77
3 The Cauchy problem for fast diffusion	84
3.1 The Cauchy problem for super-critical fast diffusion	84
3.2 The Cauchy problem for logarithmic fast diffusion	93
3.3 Further results and open problems	123
4 The initial Dirichlet problem in an infinite cylinder	133
4.1 Preliminary results	133
4.2 The friendly giant (slow diffusion)	138
4.3 The trace (slow diffusion)	143
4.4 Existence of solutions (slow diffusion)	145
4.5 Asymptotic behavior (slow diffusion)	148
4.6 A priori estimates (fast diffusion)	150
4.7 The trace and uniqueness (fast diffusion)	152
4.8 Existence of solutions (fast diffusion $m_1 < m < 1$)	153
4.9 Further results and open problems	155
5 Weak solutions	157
5.1 Weak solutions of the porous medium equation in a cylinder	157
5.2 Weak solutions of the porous medium equation	166
5.3 Further results and open problems	185
Bibliography	187
Index	197
