Preface	v
<b>Panoramic Overview</b>	<b>1</b>
Part 1. The Base Theory of Pro-Lie Groups	6
Part 2. The Algebra of Pro-Lie Algebras	19
Part 3. The Fine Lie Theory of Pro-Lie Groups	28
Part 4. Global Structure Theory of Connected Pro-Lie Groups	35
Part 5. The Role of Compactness on the Pro-Lie Algebra Level	44
Part 6. The Role of Compact Subgroups of Pro-Lie Groups	52
Part 7. Local Splitting According to Iwasawa	61
<b>1 Limits of Topological Groups</b>	<b>63</b>
Limits	63
The External Approach to Projective Limits	77
Projective Limits and Local Compactness	82
The Fundamental Theorem on Projective Limits	88
The Internal Approach to Projective Limits	90
Projective Limits and Completeness	93
The Closed Subgroup Theorem	96
The Role of Local Compactness	100
The Role of Closed Full Subcategories in Complete Categories	102
Postscript	104
<b>2 Lie Groups and the Lie Theory of Topological Groups</b>	<b>107</b>
The General Definition of a Lie Group	107
The Exponential Function of Topological Groups	110
The Lie Algebra of a Topological Group	114
The Category of Topological Groups with Lie Algebras	119
The Lie Algebra Functor Has a Left Adjoint Functor	126
Sophus Lie's Third Fundamental Theorem	130
The Adjoint Representation of a Topological Group with a Lie Algebra	131
Postscript	133
<b>3 Pro-Lie Groups</b>	<b>135</b>
Projective Limits of Lie Groups	135
The Lie Algebras of Projective Limits of Lie Groups	137
Pro-Lie Algebras	138
Weakly Complete Topological Vector Spaces and Lie Algebras	142
Pro-Lie Groups	148

Some Examples . . . . .	160
An Overview of the Definitions of a Pro-Lie Group . . . . .	160
Postscript . . . . .	164
<b>4 Quotients of Pro-Lie Groups</b> . . . . .	<b>168</b>
Quotient Objects in Categories . . . . .	169
Quotient Groups of Pro-Lie Groups . . . . .	170
The Exponential Function of Compact Abelian Groups and Quotient Mor- phisms . . . . .	173
The One Parameter Subgroup Lifting Theorem . . . . .	182
Sufficient Conditions for Quotients to be Complete . . . . .	194
Quotients and Quotient Maps between Pro-Lie Groups . . . . .	208
Postscript . . . . .	210
<b>5 Abelian Pro-Lie Groups</b> . . . . .	<b>212</b>
Examples of Abelian Pro-Lie Groups . . . . .	212
Weil’s Lemma . . . . .	215
Vector Group Splitting Theorems . . . . .	219
Compactly Generated Abelian Pro-Lie Groups . . . . .	233
Weakly Complete Topological Vector Spaces Revisited . . . . .	235
The Duality Theory of Abelian Pro-Lie Groups . . . . .	237
The Toral Homomorphic Images of an Abelian Pro-Lie Group . . . . .	241
Postscript . . . . .	246
<b>6 Lie’s Third Fundamental Theorem</b> . . . . .	<b>249</b>
Lie’s Third Fundamental Theorem for Pro-Lie Groups . . . . .	249
Semidirect Products . . . . .	264
Postscript . . . . .	266
<b>7 Profinite-Dimensional Modules and Lie Algebras</b> . . . . .	<b>269</b>
Modules over a Lie Algebra . . . . .	269
Duality of Modules . . . . .	272
Semisimple and Reductive Modules . . . . .	277
Reductive Pro-Lie Algebras . . . . .	281
Transfinitely Solvable Lie Algebras . . . . .	284
The Radical and Levi–Mal’cev: Existence . . . . .	291
Transfinitely Nilpotent Lie Algebras . . . . .	296
The Nilpotent Radicals . . . . .	300
Special Endomorphisms of Pro-Lie Algebras . . . . .	305
Levi–Mal’cev: Uniqueness . . . . .	309
Direct and Semidirect Sums Revisited . . . . .	313
Cartan Subalgebras of Pro-Lie Algebras . . . . .	315
Theorem of Ado . . . . .	330
Postscript . . . . .	332

<b>8</b>	<b>The Structure of Simply Connected Pro-Lie Groups</b>	<b>335</b>
	The Adjoint Action . . . . .	335
	Simply Connected Pronilpotent Pro-Lie Groups . . . . .	336
	The Topological Splitting Technique . . . . .	339
	Simple Connectivity . . . . .	342
	Universal Morphism versus Universal Covering Morphism . . . . .	352
	Postscript . . . . .	354
<b>9</b>	<b>Analytic Subgroups and the Lie Theory of Pro-Lie Groups</b>	<b>356</b>
	The Exponential Function on the Inner Derivation Algebra . . . . .	356
	Analytic Subgroups . . . . .	360
	Automorphisms and Invariant Analytic Subgroups . . . . .	369
	Centralizers . . . . .	370
	Normalizers . . . . .	372
	Subalgebras and Subgroups . . . . .	374
	The Center . . . . .	376
	The Commutator Subgroup . . . . .	376
	Finite-Dimensional Connected Pro-Lie Groups . . . . .	385
	Compact Central Subgroups . . . . .	402
	Divisibility of Groups and Connected Pro-Lie Groups . . . . .	404
	The Open Mapping Theorem . . . . .	409
	Completing Proto-Lie Groups . . . . .	413
	Unitary Representations . . . . .	415
	Postscript . . . . .	416
<b>10</b>	<b>The Global Structure of Connected Pro-Lie Groups</b>	<b>419</b>
	Solvability of Pro-Lie Groups . . . . .	420
	The Radical . . . . .	430
	Semisimple and Reductive Groups . . . . .	434
	Nilpotency of Pro-Lie Groups . . . . .	443
	The Nilradical and the Coreductive Radical . . . . .	447
	The Structure of Reductive Pro-Lie Groups . . . . .	451
	Postscript . . . . .	458
<b>11</b>	<b>Splitting Theorems for Pro-Lie Groups</b>	<b>461</b>
	Splitting Reductive Groups Semidirectly . . . . .	461
	Vector Group Splitting in Noncommutative Groups . . . . .	473
	The Structure of Pronilpotent and Prosolvable Groups . . . . .	478
	Conjugacy Theorems . . . . .	487
	Postscript . . . . .	490

<b>12 Compact Subgroups of Pro-Lie Groups</b>	<b>493</b>
Procompact Modules and Lie Algebras . . . . .	493
Procompact Lie Algebras and Compactly Embedded Lie Subalgebras of Pro-Lie Algebras . . . . .	500
Maximal Compactly Embedded Subalgebras of Pro-Lie Algebras . . . . .	504
Conjugacy of Maximal Compactly Embedded Subalgebras . . . . .	507
Compact Connected Groups . . . . .	516
Compact Subgroups . . . . .	519
Potentially Compact Pro-Lie Groups . . . . .	521
The Conjugacy of Maximal Compact Connected Subgroups . . . . .	524
The Analytic Subgroups Having a Full Lie Algebra . . . . .	532
Maximal Compact Subgroups of Connected Pro-Lie Groups . . . . .	544
An Alternative Open Mapping Theorem . . . . .	556
On the Center of a Connected Pro-Lie Group . . . . .	558
Postscript . . . . .	561
<b>13 Iwasawa’s Local Splitting Theorem</b>	<b>566</b>
Locally Splitting Lie Group Quotients of Pro-Lie Groups . . . . .	566
The Lie Algebra Theory of the Local Splitting . . . . .	571
Splitting on the Group Level . . . . .	578
Some Comments on Connectedness . . . . .	584
Postscript . . . . .	584
<b>14 Catalog of Examples</b>	<b>587</b>
Classification of the Examples in the Catalog . . . . .	587
Abelian Pro-Lie Groups . . . . .	587
A Simple Construction . . . . .	595
Pronilpotent Pro-Lie Groups . . . . .	598
Prosolvable Pro-Lie Groups . . . . .	602
Semisimple and Reductive Pro-Lie Groups . . . . .	608
Mixed Groups . . . . .	615
Examples Concerning the Definition of Lie and Pro-Lie Groups . . . . .	616
Analytic Subgroups of Pro-Lie Groups . . . . .	620
Examples Concerning Simple Connectivity . . . . .	622
Example Concerning $\mathfrak{g}$ -Module Theory . . . . .	622
Postscript . . . . .	623
<b>1 Appendix 1 The Campbell–Hausdorff Formalism</b>	<b>624</b>
<b>2 Appendix 2 Weakly Complete Topological Vector Spaces</b>	<b>629</b>
<b>3 Appendix 3 Various Pieces of Information on Semisimple Lie Algebras</b>	<b>651</b>
Postscript . . . . .	655

Bibliography	657
List of Symbols	667
Index	669
