Contents

Preface xi

1 Hyperbolic geodesic spaces 1
- 1.1 Geodesic metric spaces . . . 1
- 1.2 Hyperbolic geodesic spaces . . . 2
- 1.3 Stability of geodesics . . . 4
- 1.4 Supplementary results and remarks . . . 6

2 The boundary at infinity 9
- 2.1 δ-inequality and hyperbolic spaces . . . 9
- 2.2 The boundary at infinity of hyperbolic spaces . . . 12
- 2.3 Local self-similarity of the boundary . . . 16
- 2.4 Supplementary results and remarks . . . 19

3 Busemann functions on hyperbolic spaces 23
- 3.1 Busemann functions . . . 23
- 3.2 Gromov products based at infinity . . . 26
- 3.3 Visual metrics based at infinity . . . 29
- 3.4 Supplementary results and remarks . . . 30

4 Morphisms of hyperbolic spaces 35
- 4.1 Morphisms of metric spaces and hyperbolicity . . . 36
- 4.2 Cross-difference triples and cross-differences . . . 39
- 4.3 PQ-isometric maps . . . 41
- 4.4 Quasi-isometric maps of hyperbolic geodesic spaces . . . 42
- 4.5 Supplementary results and remarks . . . 44

5 Quasi-Möbius and quasi-symmetric maps 49
- 5.1 Cross-ratios . . . 49
- 5.2 Quasi-Möbius and quasi-symmetric maps . . . 50
- 5.3 Supplementary results and remarks . . . 56
- 5.4 Summary . . . 63

6 Hyperbolic approximation of metric spaces 69
6.1 Construction . . . 69
6.2 Geodesics in a hyperbolic approximation . . . 70
6.3 The boundary at infinity of a hyperbolic approximation . . . 74
6.4 Supplementary results and remarks . . . 77

7 Extension theorems 81
7.1 Extension theorem for bilipschitz maps . . . 81
7.2 Extension theorem for quasi-symmetric maps . . . 84
7.3 Extension theorem for quasi-Möbius maps . . . 87
7.4 Supplementary results and remarks . . . 95

8 Embedding theorems 97
8.1 Assouad embedding theorem . . . 97
8.2 Bonk–Schramm embedding theorem . . . 100
8.3 Supplementary results and remarks . . . 102

9 Basics of dimension theory 107
9.1 Various dimensions . . . 107
9.2 Constructions . . . 111
9.3 P-dimensions . . . 117
9.4 The monotonicity theorem . . . 121
9.5 The product theorem . . . 122
9.6 The saturation of families . . . 122
9.7 The finite union theorem . . . 123
9.8 Sperner lemma . . . 124
9.9 Supplementary results and remarks . . . 126

10 Asymptotic dimension 129
10.1 Estimates from below . . . 129
10.2 Estimates from above . . . 130
10.3 Embedding of H^2 into a product of two trees . . . 132
10.4 Supplementary results and remarks . . . 134

11 Linearly controlled metric dimension: Basic properties 137
11.1 Separated sequences of colored coverings . . . 138
11.2 Quasi-symmetry invariance of ℓ-dim . . . 141
11.3 Supplementary results and remarks . . . 145

12 Linearly controlled metric dimension: Applications 147
12.1 Embedding into the product of trees . . . 147
12.2 ℓ-dimension of locally self-similar spaces . . . 154
12.3 Applications to hyperbolic spaces . . . 156

12.4 Supplementary results and remarks 157

13 Hyperbolic dimension 159
13.1 Large scale doubling sets 159
13.2 Definition of the hyperbolic dimension 160
13.3 Hyperbolic dimension of hyperbolic spaces 162
13.4 Applications to nonembedding results 164
13.5 Supplementary results and remarks 166

14 Hyperbolic rank and subexponential corank 167
14.1 Hyperbolic rank 167
14.2 Subexponential corank 169
14.3 Applications to nonembedding results 175
14.4 Subexponential corank versus hyperbolic dimension 175
14.5 Supplementary results and remarks 177

Appendix. Models of the hyperbolic space $\mathbf{H}^n$ 181
A.1 The pseudo-spherical model 181
A.2 The unit disc model 182
A.3 The upper half-plane model 183
A.4 The solvable group model 185
A.5 Generalizations to an arbitrary dimension 186
A.6 Möbius transformations 187
A.7 Cross-ratio 188
