Preface	xi
<b>1 Hyperbolic geodesic spaces</b>	<b>1</b>
1.1 Geodesic metric spaces . . . . .	1
1.2 Hyperbolic geodesic spaces . . . . .	2
1.3 Stability of geodesics . . . . .	4
1.4 Supplementary results and remarks . . . . .	6
<b>2 The boundary at infinity</b>	<b>9</b>
2.1 $\delta$ -inequality and hyperbolic spaces . . . . .	9
2.2 The boundary at infinity of hyperbolic spaces . . . . .	12
2.3 Local self-similarity of the boundary . . . . .	16
2.4 Supplementary results and remarks . . . . .	19
<b>3 Busemann functions on hyperbolic spaces</b>	<b>23</b>
3.1 Busemann functions . . . . .	23
3.2 Gromov products based at infinity . . . . .	26
3.3 Visual metrics based at infinity . . . . .	29
3.4 Supplementary results and remarks . . . . .	30
<b>4 Morphisms of hyperbolic spaces</b>	<b>35</b>
4.1 Morphisms of metric spaces and hyperbolicity . . . . .	36
4.2 Cross-difference triples and cross-differences . . . . .	39
4.3 PQ-isometric maps . . . . .	41
4.4 Quasi-isometric maps of hyperbolic geodesic spaces . . . . .	42
4.5 Supplementary results and remarks . . . . .	44
<b>5 Quasi-Möbius and quasi-symmetric maps</b>	<b>49</b>
5.1 Cross-ratios . . . . .	49
5.2 Quasi-Möbius and quasi-symmetric maps . . . . .	50
5.3 Supplementary results and remarks . . . . .	56
5.4 Summary . . . . .	63

<b>6</b>	<b>Hyperbolic approximation of metric spaces</b>	69
6.1	Construction . . . . .	69
6.2	Geodesics in a hyperbolic approximation . . . . .	70
6.3	The boundary at infinity of a hyperbolic approximation . . . . .	74
6.4	Supplementary results and remarks . . . . .	77
<b>7</b>	<b>Extension theorems</b>	81
7.1	Extension theorem for bilipschitz maps . . . . .	81
7.2	Extension theorem for quasi-symmetric maps . . . . .	84
7.3	Extension theorem for quasi-Möbius maps . . . . .	87
7.4	Supplementary results and remarks . . . . .	95
<b>8</b>	<b>Embedding theorems</b>	97
8.1	Assouad embedding theorem . . . . .	97
8.2	Bonk–Schramm embedding theorem . . . . .	100
8.3	Supplementary results and remarks . . . . .	102
<b>9</b>	<b>Basics of dimension theory</b>	107
9.1	Various dimensions . . . . .	107
9.2	Constructions . . . . .	111
9.3	P-dimensions . . . . .	117
9.4	The monotonicity theorem . . . . .	121
9.5	The product theorem . . . . .	122
9.6	The saturation of families . . . . .	122
9.7	The finite union theorem . . . . .	123
9.8	Sperner lemma . . . . .	124
9.9	Supplementary results and remarks . . . . .	126
<b>10</b>	<b>Asymptotic dimension</b>	129
10.1	Estimates from below . . . . .	129
10.2	Estimates from above . . . . .	130
10.3	Embedding of $H^2$ into a product of two trees . . . . .	132
10.4	Supplementary results and remarks . . . . .	134
<b>11</b>	<b>Linearly controlled metric dimension: Basic properties</b>	137
11.1	Separated sequences of colored coverings . . . . .	138
11.2	Quasi-symmetry invariance of $\ell$ -dim . . . . .	141
11.3	Supplementary results and remarks . . . . .	145
<b>12</b>	<b>Linearly controlled metric dimension: Applications</b>	147
12.1	Embedding into the product of trees . . . . .	147
12.2	$\ell$ -dimension of locally self-similar spaces . . . . .	154
12.3	Applications to hyperbolic spaces . . . . .	156

12.4	Supplementary results and remarks . . . . .	157
<b>13</b>	<b>Hyperbolic dimension</b>	<b>159</b>
13.1	Large scale doubling sets . . . . .	159
13.2	Definition of the hyperbolic dimension . . . . .	160
13.3	Hyperbolic dimension of hyperbolic spaces . . . . .	162
13.4	Applications to nonembedding results . . . . .	164
13.5	Supplementary results and remarks . . . . .	166
<b>14</b>	<b>Hyperbolic rank and subexponential corank</b>	<b>167</b>
14.1	Hyperbolic rank . . . . .	167
14.2	Subexponential corank . . . . .	169
14.3	Applications to nonembedding results . . . . .	175
14.4	Subexponential corank versus hyperbolic dimension . . . . .	175
14.5	Supplementary results and remarks . . . . .	177
<b>Appendix.</b>	<b>Models of the hyperbolic space <math>H^n</math></b>	<b>181</b>
A.1	The pseudo-spherical model . . . . .	181
A.2	The unit disc model . . . . .	182
A.3	The upper half-plane model . . . . .	183
A.4	The solvable group model . . . . .	185
A.5	Generalizations to an arbitrary dimension . . . . .	186
A.6	Möbius transformations . . . . .	187
A.7	Cross-ratio . . . . .	188
	Bibliography	193
	Index	197
