| Preface | v |
| Introduction | 1 |
| 1 Bornological vector spaces and inductive systems | 9 |
| 1.1 Basic definitions | 13 |
| 1.2 Some functional analysis | 22 |
| 1.3 Constructions with bornological vector spaces | 29 |
| 1.4 Categories of inductive systems | 53 |
| 1.5 Dissecting bornological vector spaces | 59 |
| 1.6 Metrisability and the approximation property | 67 |
| 2 Relations between entire, analytic, and local cyclic homology | 74 |
| 2.1 Several definitions | 76 |
| 2.2 Comparison of analytic and local cyclic homology | 82 |
| 2.3 The local homotopy category of chain complexes | 84 |
| 2.4 Some counterexamples with compact Lie groups | 98 |
| 3 The spectral radius of bounded subsets and its applications | 105 |
| 3.1 The spectral radius | 106 |
| 3.2 Locally multiplicative bornological algebras | 108 |
| 3.3 Analytically nilpotent bornological algebras | 116 |
| 3.4 Isoradial homomorphisms | 117 |
| 3.5 Examples of isoradial homomorphisms | 122 |
| 3.6 Isoradial hulls of subalgebras | 131 |
| 3.7 Passage to inductive systems | 135 |
| 4 Periodic cyclic homology via pro-nilpotent extensions | 143 |
| 4.1 Pro-algebras | 145 |
| 4.2 Homotopy invariance of periodic cyclic homology | 155 |
| 4.3 Excision in periodic cyclic homology | 159 |
| 4.4 Exterior products | 173 |
| 5 Analytic cyclic homology and analytically nilpotent extensions | 179 |
| 5.1 Lanilcurs and the analytic tensor algebra | 180 |
| 5.2 Analytic cyclic homology via analytic tensor algebras | 193 |
| 5.3 Basic properties | 197 |
| 5.4 Excision in analytic and local cyclic homology | 212 |

| | | |
|----------|--|------------|
| 6 | Local homotopy invariance and isoradial subalgebras | 240 |
| 6.1 | Local homotopy equivalences | 241 |
| 6.2 | Approximate local homotopy equivalences | 247 |
| 6.3 | Application to isoradial homomorphisms | 250 |
| 6.4 | Local and approximate local homotopy category | 255 |
| 7 | The Chern–Connes character | 259 |
| 7.1 | The bivariant Chern–Connes character | 260 |
| 7.2 | The Universal Coefficient Theorem | 266 |
| 7.3 | The character for idempotents and invertibles | 270 |
| 7.4 | Finitely summable Fredholm modules | 273 |
| 7.5 | The character for general Fredholm modules | 279 |
| | Appendix. Algebraic preliminaries | 291 |
| A.1 | Chain complexes over additive categories | 291 |
| A.2 | Basic constructions with algebras and modules | 298 |
| A.3 | Non-commutative differential forms | 308 |
| A.4 | Fedosov type products | 314 |
| A.5 | Homological algebra for modules | 321 |
| A.6 | Hochschild homology and cyclic homology | 328 |
| A.7 | Biprojective algebras | 338 |
| | Bibliography | 343 |
| | Notation and Symbols | 349 |
| | Index | 355 |
