Contents

Preface vii

Chapter 1. Linkages and Polygon Spaces 1
1.1. Configuration space of a linkage 2
1.2. The robot arm workspace map 5
1.3. Varieties of quadrangles: $n = 4$ 6
1.4. Short, long and median subsets 9
1.5. The robot arm distance map 11
1.6. Poincaré polynomials of planar polygon spaces 16
1.7. Morse theory on manifolds with involutions 19
1.8. Proof of Theorem 1.7 24
1.9. Maximum of the total Betti number of M_ℓ 30
1.10. On the conjecture of Kevin Walker 31
1.11. Topology of random linkages 36

Chapter 2. Euler Characteristics of Configuration Spaces 41
2.1. The Euler – Gal power series 41
2.2. Configuration spaces of manifolds 45
2.3. Configuration spaces of graphs 46
2.4. Recurrent formula for $\mathfrak{eu}_X(t)$ 49
2.5. Cut and paste surgery 54
2.6. Cut and paste Grothendieck ring 55
2.7. Cones and cylinders 57
2.8. Proof of Theorem 2.3 59

Chapter 3. Knot Theory of the Robot Arm 61
3.1. Can a robot arm be knotted? 61
3.2. Expansive motions 64
3.3. Infinitesimal motions 67
3.4. Struts and equilibrium stresses 68
3.5. Maxwell – Cremona Theorem 72
3.6. The main argument 75
3.7. Global motion 77

Chapter 4. Navigational Complexity of Configuration Spaces . . 87
4.1. Motion planning algorithms 87
4.2. The concept $\mathsf{TC}(X)$ 89
4.3. The notion of relative complexity 99
4.4. Navigation functions 102
4.5. $\mathsf{TC}(X)$, cohomology, and cohomology operations 106
4.6. Simultaneous control of multiple objects 114
4.7. Collision-free motion planning 117
4.8. Motion planning and the immersion problem 121

Recommendations for further reading 125
