

# Contents

Preface	v
<b>1 Preliminaries</b>	1
1.1 Notation . . . . .	1
1.2 Plain bases and unconditional bases . . . . .	1
1.3 Orthogonal bases and frames . . . . .	5
1.4 Orthogonal projections and complements . . . . .	8
<b>2 Time-frequency analysis</b>	10
2.1 Fourier analysis . . . . .	10
2.2 The windowed Fourier transform and Gabor bases . . . . .	18
2.3 Local trigonometric expansions . . . . .	23
2.4 The wavelet transform . . . . .	27
<b>3 Multiresolution analysis and wavelets</b>	31
3.1 Multiresolution analysis . . . . .	31
3.2 The Haar wavelet and MRA . . . . .	34
3.3 Algorithm: The fast wavelet transform . . . . .	38
3.4 Daubechies style wavelets . . . . .	42
3.5 Other plain wavelets . . . . .	52
<b>4 Friends, relatives, and mutations of wavelets</b>	54
4.1 Biorthogonal MRA and wavelets . . . . .	54
4.2 Multiwavelets . . . . .	60
4.3 Wavelets in 2-D . . . . .	64
4.4 Wavelet packets . . . . .	65
4.5 Second generation wavelets . . . . .	68
4.6 An alternative localization notion and the prolate spheroidal wave functions . . . . .	75
<b>5 Assorted applications</b>	77
5.1 Signal/image processing . . . . .	77
5.2 Calculus with wavelets . . . . .	80
5.3 Applications to functional analysis . . . . .	85
5.4 Applications to differential equations . . . . .	88
<b>6 References and further reading</b>	92

Internet references	95
Bibliography	97
