

Table of Contents

I.	Quantum vs. Classical Dynamics	1
I.1	A First Look	1
I.1.1	Classical Mechanics	1
I.1.2	Quantum Mechanics	2
I.2	The Free Schrödinger Equation	3
I.2.1	Dispersion Relation	3
I.2.2	Solution by Fourier Transformation	4
I.2.3	Propagation of Heavy Wave Packets	6
I.3	The Schrödinger Equation with a Potential	7
I.3.1	Self-Adjoint Operators and Existence of Dynamics	7
I.3.2	Potentials Giving Self-Adjoint Operators	9
I.3.3	Lie–Trotter Product Formula	9
I.4	Averages, Commutators, Uncertainty	11
I.4.1	Observables and Averages	11
I.4.2	Heisenberg Picture and Ehrenfest Theorem	11
I.4.3	Heisenberg Uncertainty Relation	13
I.5	Many-Body Systems	14
I.5.1	Distinguishable Particles	14
I.5.2	Indistinguishable Particles	15
I.5.3	The Molecular Hamiltonian	16
II.	Reduced Models via Variational Approximation	19
II.1	The Dirac–Frenkel Time-Dependent Variational Principle	19
II.1.1	Abstract Formulation	19
II.1.2	Interpretation as an Orthogonal Projection	20
II.1.3	Interpretation as a Symplectic Projection	21
II.1.4	Interpretation as an Action Principle	23
II.1.5	Conservation Properties	23
II.1.6	An A Posteriori Error Bound	24
II.2	Adiabatic / Born–Oppenheimer Approximation	25
II.2.1	Electronic Schrödinger Equation	25
II.2.2	Schrödinger Equation for the Nuclei on an Electronic En- ergy Surface	25

	II.2.3	Semi-Classical Scaling	27
	II.2.4	Spectral Gap Condition	28
	II.2.5	Approximation Error	29
II.3		Separating the Particles: Self-Consistent Field Methods	33
	II.3.1	Time-Dependent Hartree Method (TDH)	34
	II.3.2	Time-Dependent Hartree–Fock Method (TDHF)	37
	II.3.3	Multi-Configuration Methods (MCTDH, MCTDHF)	42
II.4		Parametrized Wave Functions: Gaussian Wave Packets	46
	II.4.1	Variational Gaussian Wave-Packet Dynamics	47
	II.4.2	Non-Canonical Hamilton Equations in Coordinates	48
	II.4.3	Poisson Structure of Gaussian Wave-Packet Dynamics	51
	II.4.4	Approximation Error	53
II.5		Mixed Models, Quantum-Classical Models	54
	II.5.1	Mean-Field Quantum-Classical Model	54
	II.5.2	Quantum Dressed Classical Mechanics	56
	II.5.3	Swarms of Gaussians	57
II.6		Quasi-Optimality of Variational Approximations	58
III.		Numerical Methods for the Time-Dependent Schrödinger Equation	63
III.1		Space Discretization by Spectral Methods	63
	III.1.1	Galerkin Method, 1D Hermite Basis	64
	III.1.2	Higher Dimensions: Hyperbolic Cross and Sparse Grids	70
	III.1.3	Collocation Method, 1D Fourier Basis	75
	III.1.4	Higher Dimensions: Hyperbolic Cross and Sparse Grids	79
III.2		Polynomial Approximations to the Matrix Exponential	85
	III.2.1	Chebyshev Method	85
	III.2.2	Lanczos Method	91
III.3		Splitting and Composition Methods	96
	III.3.1	Splitting Between Kinetic Energy and Potential	96
	III.3.2	Error Bounds for the Strang Splitting	98
	III.3.3	Higher-Order Compositions	101
III.4		Integrators for Time-Dependent Hamiltonians	102
IV.		Numerical Methods for Non-Linear Reduced Models	105
IV.1		Variational Space Discretization	105
	IV.1.1	Abstract Formulation	105
	IV.1.2	Space Discretization of the Hartree and MCTDH Equations	106
	IV.1.3	Discretization Error	108
IV.2		Variational Splitting: Abstract Formulation	109
	IV.2.1	Splitting the Variational Equation	109
	IV.2.2	Error Analysis	110
IV.3		Variational Splitting for MCTDH	116
IV.4		Variational Splitting for Gaussian Wave Packets	118

V. Semi-Classical Dynamics Using Hagedorn Wave Packets	123
V.1 Hagedorn's Parametrization of Gaussian Wave Packets	123
V.2 Hagedorn's Semi-Classical Wave Packets	127
V.3 A Numerical Integrator for Hagedorn Wave Packets	131
Bibliography	137
