Contents

1 Introduction 1
- 1.1 Purpose of the book . . . 4
- 1.2 The class of PDEs discussed in the book . . . 5
- 1.3 Operator splitting for initial-value problems . . . 6
- 1.4 Operator splitting for convection-diffusion equations . . . 8
- 1.5 Rigorous analysis of operator-splitting methods . . . 8
- 1.6 Topics not treated in the book . . . 10
- 1.7 Organization of the book . . . 11
- 1.8 MATLAB programs . . . 12
- 1.9 A guide to the reader . . . 13
- 1.10 Notation . . . 14

2 Simple Examples of Semi-Discrete Operator Splitting 17

3 General Convergence Theory 26
- 3.1 Mathematical preliminaries . . . 27
- 3.2 Degenerate parabolic equations . . . 31
- 3.3 Weakly coupled systems of degenerate parabolic equations . . . 36
- 3.4 A general convergence theory . . . 38

4 Convergence Results for Convection-Diffusion Problems 51
- 4.1 A semi-discrete splitting method . . . 52
- 4.2 A fully discrete splitting method . . . 56
  - 4.2.1 Convergence in the discrete L^1 norm . . . 58
  - 4.2.2 Convergence analysis . . . 61
- 4.3 Nonlinear error mechanisms . . . 74
- 4.4 Viscous splitting with *a posteriori* flux splitting . . . 78

5 Error Estimates for Hyperbolic Problems 88
- 5.1 Multi-dimensional scalar conservation laws . . . 88
- 5.2 Weakly coupled systems of conservation laws . . . 116

6 Operator Splitting for Systems of Equations 136
- 6.1 Operator splitting in porous media flow . . . 136
  - 6.1.1 Dimensional splitting . . . 138
  - 6.1.2 Dimensional splitting combined with viscous splitting . . . 141
  - 6.1.3 Streamline methods . . . 146
- 6.2 Dimensional splitting for systems of conservation laws . . . 150
- 6.3 Operator splitting for balance laws . . . 159

6.3.1 Geometric source terms 159
6.3.2 Equilibrium states 162
6.3.3 Reactive flows 163
6.3.4 External forces 167
6.4 Final remarks 170

A A Crash Course in Numerical Methods for Conservation Laws 173
A.1 Hyperbolic conservation laws 173
A.2 Finite-volume methods 175
A.3 Conservative methods 176
A.4 A few classical schemes 177
A.5 Convergence of conservative methods 181
A.6 High-resolution Godunov methods 184
A.6.1 High-resolution central schemes 186
A.6.2 High-resolution upwind schemes 192
A.7 Front tracking 193
