Preface v

1 Introduction 1

2 The $\mathcal{L}^2$-theory 9
- 2.1 The basic $\mathcal{L}^2$-setup . . . 9
- 2.2 Special boundary charts . . . 12
- 2.3 Sobolev spaces of forms . . . 13
- 2.4 Density of 'nice' forms . . . 15
- 2.5 Weighted norms . . . 18
- 2.6 The 'twisted' Kohn–Morrey–Hörmander formula . . . 18
- 2.7 The role of pseudoconvexity . . . 22
- 2.8 Complex Laplacian and $\bar{\partial}$-Neumann operator . . . 28
- 2.9 Applications of real potential theory . . . 33
- 2.10 Restriction of forms to subdomains . . . 37
- 2.11 Solvability of $\bar{\partial}$ in $C^\infty_{(0,q)}(\Omega)$ . . . 39
- 2.12 Non-plurisubharmonic weights . . . 42
- 2.13 $\bar{\partial}$-techniques, the Ohsawa–Takegoshi extension theorem . . . 45

3 Strictly pseudoconvex domains 51
- 3.1 Estimates at the ground level . . . 51
- 3.2 Estimates for operators related to the $\bar{\partial}$-Neumann operator . . . 52
- 3.3 Sobolev estimates, elliptic regularization . . . 55
- 3.4 Pseudolocal estimates . . . 67
- 3.5 Singular holomorphic functions . . . 71

4 Compactness 74
- 4.1 An application to Toeplitz operators . . . 74
- 4.2 General facts concerning compactness in the $\bar{\partial}$-Neumann problem . . . 76
- 4.3 Estimates in Sobolev norms . . . 80
- 4.4 A sufficient condition for compactness . . . 83
- 4.5 Analysis of property (P_q) . . . 87
- 4.6 Some examples . . . 91
- 4.7 Hartogs domains in $\mathbb{C}^2$ . . . 94
- 4.8 Obstructions to property (P_q) and to compactness . . . 97
- 4.9 Locally convexifiable domains . . . 108
- 4.10 A variant of property (P_q) . . . 113
- 4.11 Geometric sufficient conditions for compactness . . . 118

5 Regularity in Sobolev spaces 126
5.1 Kohn's weighted theory 126
5.2 A linear solution operator continuous in $C^\infty(\overline{\Omega})$ 132
5.3 Regularity: the Bergmann projections vs the $\bar{\partial}$-Neumann operators . . 136
5.4 Benign derivatives 139
5.5 Good vector fields imply Sobolev estimates 142
5.6 Domains with symmetries 149
5.7 Commutators with strictly pseudoconvex directions 151
5.8 Good vector fields and the complex Hessian of a defining function . . 153
5.9 A useful one-form 157
5.10 Submanifolds in the boundary and a cohomology class 160
5.11 A foliation in the boundary 163
5.12 Worm domains 165
5.13 A unified approach to global regularity 170
