<b>Preface</b>	vii
<b>1 Introduction</b>	1
1.1 Outline of the monograph . . . . .	2
1.2 Two prototypical classes of examples . . . . .	4
1.2.1 Nonlinear matroid problems . . . . .	4
1.2.2 Nonlinear multicommodity flows . . . . .	7
1.3 Notation, complexity, and finiteness . . . . .	11
1.3.1 Notation . . . . .	11
1.3.2 Complexity . . . . .	11
1.3.3 Finiteness . . . . .	12
<b>2 Convex Discrete Maximization</b>	14
2.1 Image and fibers . . . . .	15
2.2 Small radius and weight . . . . .	18
2.3 Convex maximization with edge directions . . . . .	23
2.3.1 Edge directions and zonotopes . . . . .	23
2.3.2 Efficient convex maximization . . . . .	26
2.3.3 Small radius and weight revisited . . . . .	28
2.3.4 Totally unimodular systems . . . . .	29
2.4 Convex combinatorial maximization . . . . .	31
2.5 Some applications . . . . .	33
2.5.1 Quadratic binary programming . . . . .	33
2.5.2 Matroids and matroid intersections . . . . .	34
2.5.3 Vector partitioning and clustering . . . . .	36
<b>3 Nonlinear Integer Programming</b>	40
3.1 Graver bases . . . . .	40
3.2 Efficient separable convex minimization . . . . .	43
3.3 Specializations and extensions . . . . .	48
3.3.1 Linear integer programming . . . . .	48
3.3.2 Distance minimization . . . . .	48
3.3.3 Convex integer maximization . . . . .	49
3.3.4 Weighted separable convex minimization . . . . .	50
3.3.5 Totally unimodular systems revisited . . . . .	51
3.4 Bounds on Graver bases . . . . .	52

<b>4</b>	<b><i>n</i>-Fold Integer Programming</b>	<b>54</b>
4.1	Graver bases of <i>n</i> -fold products . . . . .	55
4.2	Efficient <i>n</i> -fold integer programming . . . . .	58
4.3	Some applications . . . . .	62
4.3.1	Nonlinear many-commodity transshipment . . . . .	62
4.3.2	Nonlinear multicommodity transportation . . . . .	63
4.4	Stochastic integer programming . . . . .	65
4.5	Graver approximation scheme . . . . .	71
<b>5</b>	<b>Multiway Tables and Universality</b>	<b>74</b>
5.1	The universality theorem . . . . .	76
5.2	Some applications . . . . .	80
5.2.1	Multiindex transportation problems . . . . .	80
5.2.2	Privacy in statistical databases . . . . .	83
5.2.3	Extensions to hierarchical margins . . . . .	86
5.3	Universality of <i>n</i> -fold integer programming . . . . .	88
5.4	Graver complexity of graphs and digraphs . . . . .	90
<b>6</b>	<b>Nonlinear Combinatorial Optimization</b>	<b>97</b>
6.1	Nonlinear matroid optimization . . . . .	98
6.1.1	Preparation . . . . .	98
6.1.2	Matroids . . . . .	100
6.1.3	Matroid intersections . . . . .	103
6.2	Optimization over independence systems . . . . .	108
6.2.1	Approximative nonlinear optimization . . . . .	109
6.2.2	Exponential time to exact optimization . . . . .	117
6.3	Some applications . . . . .	119
6.3.1	Nonlinear bipartite matching . . . . .	119
6.3.2	Experimental design . . . . .	120
6.3.3	Universal Gröbner bases . . . . .	122
	<b>Bibliography</b>	<b>129</b>
	<b>Index</b>	<b>135</b>
