Preface	v
1 Modular functions and modular forms	1
1.1 Linear fractional transformations	1
1.2 Fundamental domains, invariant measures	2
1.3 Riemann surfaces associated with Fuchsian groups	5
1.4 Modular functions and modular forms	7
1.5 Congruence subgroups	9
1.6 Cusps of $\Gamma_0(N)\backslash H^*$	10
1.7 The normalizer of $\Gamma_0(N)$	12
1.8 The genus of $\Gamma_0(N)\backslash H^*$	14
1.9 The genus of $\Gamma\backslash H^*$, where $\Gamma = \langle \Gamma_0(N), W_e, W_f, \dots \rangle$	15
1.10 The subgroup $n h + e, f, \dots$	16
2 Dedekind eta function	17
2.1 The Dedekind eta function $\eta(z)$	17
2.2 The Poisson Sum Formula and applications	18
2.3 Theta transformation formula	23
2.4 Transformation formula for $\eta(t)$	25
2.5 Quadratic reciprocity law, quadratic characters, and Petersson constants	27
3 “Moonshine” of finite groups	31
3.1 Generalized partitions	31
3.2 Harmonies	44
3.3 Symmetric and alternating products of representations	47
4 Multiplicative product of η functions	53
Appendix. Genus zero discrete groups	65
Bibliography	67
