Preface	v
1 The Geometrisation Conjecture	1
1.1 Introduction	1
1.2 Ricci flow and elliptisation	5
1.2.1 Ricci flow	5
1.2.2 Ricci flow with bubbling-off	6
1.2.3 Application to elliptisation	9
1.3 3-manifolds with infinite fundamental group	11
1.3.1 Long-time behaviour of the Ricci flow with bubbling-off	11
1.3.2 Hyperbolisation	13
1.4 Some consequences of geometrisation	15
1.4.1 The homeomorphism problem	15
1.4.2 Fundamental group	17
1.5 Final remarks	21
1.5.1 Comparison with Perelman's original arguments	21
1.5.2 Beyond geometrisation	21
Part I Ricci flow with bubbling-off: definitions and statements	23
2 Basic definitions	25
2.1 Riemannian geometry conventions	25
2.2 Evolving metrics and Ricci flow with bubbling-off	26
3 Piecing together necks and caps	31
3.1 Necks, caps and tubes	31
3.1.1 Necks	31
3.1.2 Caps and tubes	31
3.2 Gluing results	32
3.3 More results on ε -necks	35
4 κ-noncollapsing, canonical geometry and pinching	37
4.1 κ -noncollapsing	37
4.2 κ -solutions	38
4.2.1 Definition and main results	38
4.2.2 Canonical neighbourhoods	39
4.3 The standard solution I	40
4.3.1 Definition and main results	40
4.3.2 Neck strengthening	41

4.4	Curvature pinched toward positive	43
5	Ricci flow with (r, δ, κ)-bubbling-off	46
5.1	Let the constants be fixed	46
5.2	Metric surgery and cutoff parameters	47
5.3	Finite-time existence theorem for Ricci flow with (r, δ, κ) -bubbling-off	50
5.3.1	The statements	50
5.3.2	Proof of the finite-time existence theorem, assuming Propositions A, B, C	51
5.4	Long-time existence of Ricci flow with bubbling-off	54
Part II	Ricci flow with bubbling-off: existence	57
6	Choosing cutoff parameters	59
6.1	Bounded curvature at bounded distance	59
6.1.1	Preliminaries	60
6.1.2	Proof of Curvature-Distance Theorem 6.1.1	62
6.2	Existence of cutoff parameters	70
7	Metric surgery and the proof of Proposition A	75
7.1	The standard solution II	75
7.2	Proof of the metric surgery theorem	79
7.3	Proof of Proposition A	86
8	Persistence	88
8.1	Introduction	88
8.2	Persistence of a model	90
8.3	Application: persistence of almost standard caps	95
9	Canonical neighbourhoods and the proof of Proposition B	97
9.1	Warming up	97
9.2	The proof	98
10	κ-noncollapsing and the proof of Proposition C	108
10.1	Preliminaries	109
10.1.1	Basic facts on κ -noncollapsing	109
10.1.2	Perelman's \mathcal{L} -length	111
10.2	Proof of Theorem 10.0.3	112
10.3	κ -noncollapsing of Ricci flow with bubbling-off: proof of Proposition C	116
10.3.1	The case $\rho_0 < \hat{r}$	121
10.3.2	The case $\rho_0 \geq \hat{r}$	123
10.4	κ -noncollapsing at bounded distance of the thick part	125

10.4.1 A formal computation	126
10.4.2 Justification of the formal computations	127
Part III Long-time behaviour of Ricci flow with bubbling-off	131
11 The thin-thick decomposition theorem	133
11.1 Introduction: main statements	133
11.2 Proof of the thin-thick decomposition theorem	136
11.2.1 Rescaled volume is bounded and limits are hyperbolic	136
11.2.2 Hyperbolic limits exist: proof of part (ii)	139
11.2.3 Locally controlled curvature: proof of part (iii)	143
12 Refined estimates for long-time behaviour	146
12.1 Spatial extension of local estimates: proof of Theorem 11.1.3	146
12.1.1 Canonical neighbourhoods: proof of part (b)	146
12.1.2 Curvature-distance estimates: proof of part (c)	153
12.2 Curvature estimates in the thick part: proof of Theorem 11.1.6	156
Part IV Weak collapsing and hyperbolisation	177
13 Collapsing, simplicial volume and strategy of proof	179
13.1 Collapsing and weak collapsing	179
13.2 Simplicial volume	181
13.2.1 Definition and first examples	182
13.2.2 Simplicial volume and geometric decompositions	182
13.2.3 Simplicial volume and collapsing	183
13.3 Sketch of proof of Theorem 13.1.3	184
13.3.1 The collapsing case	184
13.3.2 The general case	185
13.4 Comments	185
14 Proof of the weak collapsing theorem	188
14.1 Structure of the thick part	188
14.2 Local structure of the thin part	190
14.3 Constructions of coverings	195
14.3.1 Embedding thick pieces in solid tori	195
14.3.2 Existence of a homotopically nontrivial open set	195
14.3.3 End of the proof: covering by virtually abelian subsets	201
15 A rough classification of 3-manifolds	207

Appendix A 3-manifold topology	209
A.1 General notation	209
A.2 Alexander's theorem and consequences	209
A.3 Submanifolds with compressible boundary	210
A.4 Covering 3-manifolds by abelian subsets	211
Appendix B Comparison geometry	213
B.1 Comparison and compactness theorems	213
B.2 Manifolds with nonnegative curvature	214
Appendix C Ricci flow	217
C.1 Existence and basic properties	217
C.2 Consequences of the maximum principle	217
C.3 Compactness	218
C.4 Harnack inequalities for the Ricci Flow	219
C.5 Ricci Flow on cones	220
Appendix D Alexandrov spaces	221
Appendix E A sufficient condition for hyperbolicity	222
Bibliography	225
Index	235
