Preface v

Introduction 1

I Cross theorems without singularities 7

1 Classical results I 9
1.1 Osgood and Hartogs theorems . . . 9
1.1.1 Leja's proof . . . 12
1.1.2 Koseki's proof . . . 18
1.1.3 Applications . . . 19
1.1.4 Counterexamples . . . 21
1.2 Separately continuous–holomorphic functions . . . 22
1.3 Separately pluriharmonic functions I . . . 24
1.4 Hukuhara and Shimoda theorems . . . 25

2 Prerequisites 28
2.1 Extension of holomorphic functions . . . 28
2.1.1 Riemann regions . . . 28
2.1.2 Holomorphic functions on Riemann regions . . . 30
2.1.3 Lebesgue measure on Riemann regions . . . 31
2.1.4 Sheaf of I-germs of holomorphic functions . . . 32
2.1.5 Holomorphic extension of Riemann regions . . . 33
2.1.6 Regions of existence . . . 35
2.1.7 Maximal holomorphic extensions . . . 36
2.2 Holomorphic convexity . . . 38
2.3 Plurisubharmonic functions . . . 39
2.4 Singular sets . . . 46
2.5 Pseudoconvexity . . . 47
2.5.1 Smooth regions . . . 48
2.5.2 Pseudoconvexity in terms of the boundary distance . . . 48
2.5.3 Basic properties of pseudoconvex domains . . . 49
2.5.4 Smooth pseudoconvex domains . . . 49
2.5.5 Levi problem . . . 50
2.6 The Grauert boundary of a Riemann domain . . . 51
2.7 The Docquier–Grauert criteria . . . 53
2.8 Meromorphic functions . . . 54
2.9 Reinhardt domains . . . 56

3 Relative extremal functions 58
3.1 Convex extremal function . . . 58
3.2 Relative extremal function . . . 62
3.3 Balanced case . . . 72
3.4 Reinhardt case . . . 73
3.5 An example . . . 74
3.6 Plurithin sets . . . 80
3.7 Relative boundary extremal function . . . 81

4 Classical results II 85
4.1 Tuichiev theorem . . . 85
4.2 Terada theorem . . . 86
4.3 Separately harmonic functions I . . . 90
4.4 Miscellanea . . . 91
4.4.1 Hartogs' problem for "non-linear" fibers . . . 91
4.4.2 Boundary analogues of the Hartogs theorem . . . 92
4.4.3 Forelli type results . . . 92

5 Classical cross theorem 93
5.1 N-fold crosses . . . 93
5.2 Reinhardt case . . . 98
5.3 Separately polynomial functions . . . 99
5.4 Main cross theorem . . . 104
5.4.1 Siciak's approach . . . 108
5.4.2 Proof of the cross theorem . . . 117
5.5 A mixed cross theorem . . . 121
5.6 Bochner, edge of the wedge, Browder, and Lelong theorems . . . 124
5.7 Separately harmonic functions II . . . 126
5.8 Miscellanea . . . 128
5.8.1 p-separately analytic functions . . . 128
5.8.2 Separate subharmonicity . . . 129

6 Discs method 131
6.1 Some prerequisites . . . 131
6.2 Cross theorem for manifolds . . . 135

7 Non-classical cross theorems 141
7.1 Cross theorem for generalized crosses . . . 141
7.2 (N,k)-crosses . . . 146
7.3 Hartogs type theorem for 2-separately holomorphic functions . . . 156

8 Boundary cross theorems 158
8.1 Boundary crosses . . . 158
8.2 Classical results . . . 160
8.2.1 The Laplace-Fourier transform method . . . 160
8.2.2 The Carleman operator method . . . 170

II Cross theorems with singularities 181

9 Extension with singularities 183
9.1 Sections of regions of holomorphy . . . 183
9.2 Chirka–Sadullaev theorem . . . 188
9.2.1 The Gonchar class $\boldsymbol{R^o}$ . . . 188
9.2.2 Oka–Nishino theorem . . . 205
9.2.3 Chirka–Sadullaev theorem . . . 208
9.3 Separately pluriharmonic functions II . . . 211
9.4 Grauert–Remmert, Dloussky, and Chirka theorems . . . 212

10 Cross theorem with singularities 221
10.1 Öktem and Siciak theorems . . . 221
10.2 General cross theorem with singularities . . . 223
10.3 Proof of Theorem 10.2.12 . . . 230
10.4 Proof of Theorem 10.2.6 in a special case for $N = 2$ . . . 232
10.5 Separately pluriharmonic functions III . . . 243
10.6 Proof of Theorem 10.2.6 in the general case . . . 245
10.7 Example and application . . . 252

11 Separately meromorphic functions 255
11.1 Rothstein theorem . . . 255
11.2 Cross theorem with singularities for meromorphic functions . . . 258
11.3 The case $N = 2$ . . . 261
11.4 Counterexamples . . . 265
