

# Contents

<b>Preface</b>	xiii
<b>Prerequisites and reading plan</b>	xvii
<b>Historical context diagram</b>	xix
<b>Introduction</b>	xxi
Structure of the subject . . . . .	xxi
Sets of base points: Enter groupoids . . . . .	xxi
Groupoids in 2-dimensional homotopy theory . . . . .	xxii
Crossed modules . . . . .	xxiii
Filtered spaces . . . . .	xxv
Crossed complexes . . . . .	xxvi
Why crossed complexes? . . . . .	xxvi
Higher Homotopy Seifert–van Kampen Theorem . . . . .	xxvii
Cubical sets with connections . . . . .	xxviii
Why cubical homotopy omega-groupoids with connections? . . . . .	xxx
Diagram of the relations between the main structures . . . . .	xxxii
Structure of the book . . . . .	xxxiii
<b>I 1- and 2-dimensional results</b>	1
<b>Introduction to Part I</b>	3
<b>1 History</b>	5
1.1 Basic intuitions . . . . .	6
1.2 The fundamental group and homology . . . . .	8
1.3 The search for higher dimensional versions of the fundamental group . . . . .	10
1.4 The origin of the concept of abstract groupoid . . . . .	12
1.5 The Seifert–van Kampen Theorem . . . . .	14
1.6 Proof of the Seifert–van Kampen Theorem (groupoid case) . . . . .	17
1.7 The fundamental group of the circle . . . . .	25
1.8 Higher order groupoids . . . . .	28
<b>2 Homotopy theory and crossed modules</b>	31
2.1 Homotopy groups and relative homotopy groups . . . . .	33
2.2 Whitehead’s work on crossed modules . . . . .	38
2.3 The 2-dimensional Seifert–van Kampen Theorem . . . . .	42
2.4 The classifying spaces of a group and of a crossed module . . . . .	46

2.5	$\text{Cat}^1$ -groups . . . . .	49
2.6	The fundamental crossed module of a fibration . . . . .	52
2.7	The category of categories internal to groups . . . . .	56
<b>3</b>	<b>Basic algebra of crossed modules</b>	64
3.1	The context of presentation of groups and identities among relations . . . . .	67
3.1.i	Introduction . . . . .	67
3.1.ii	Van Kampen diagrams . . . . .	71
3.2	Presentations and identities: 2 . . . . .	74
3.3	Precrossed and crossed modules . . . . .	75
3.4	Free precrossed and crossed modules . . . . .	78
3.4.i	Free crossed module as an adjoint functor . . . . .	79
3.5	Precat $^1$ -groups and the existence of colimits . . . . .	81
3.6	Implementation of crossed modules in GAP . . . . .	82
<b>4</b>	<b>Coproducts of crossed <math>P</math>-modules</b>	86
4.1	The coproduct of crossed $P$ -modules . . . . .	87
4.2	The coproduct of two crossed $P$ -modules . . . . .	89
4.3	The coproduct and the 2-dimensional Seifert–van Kampen Theorem . . . . .	93
4.4	Some special cases of the coproduct . . . . .	98
<b>5</b>	<b>Induced crossed modules</b>	105
5.1	Pullbacks of precrossed and crossed modules . . . . .	107
5.2	Induced precrossed and crossed modules . . . . .	109
5.3	Construction of induced crossed modules . . . . .	112
5.4	Induced crossed modules and the Seifert–van Kampen Theorem in dimension 2 . . . . .	113
5.5	Calculation of induced crossed modules: the epimorphism case . . . . .	117
5.6	The monomorphism case: inducing from crossed modules over a subgroup . . . . .	120
5.7	On the finiteness of induced crossed modules . . . . .	124
5.8	Inducing crossed modules by a normal inclusion . . . . .	126
5.9	Computation of induced crossed modules . . . . .	136
<b>6</b>	<b>Double groupoids and the 2-dimensional Seifert–van Kampen Theorem</b>	142
6.1	Double categories . . . . .	144
6.2	The category of crossed modules over groupoids . . . . .	152
6.3	The fundamental double groupoid of a triple of spaces . . . . .	156
6.4	Thin structures on a double category: the category of double groupoids . . . . .	163
6.5	Connections in a double category: equivalence with thin structure . . . . .	170
6.6	Equivalence between crossed modules and double groupoids: folding . . . . .	176
6.7	Homotopy Commutativity Lemma . . . . .	183
6.8	Proof of the 2-dimensional Seifert–van Kampen Theorem . . . . .	192

<b>II Crossed complexes</b>	<b>205</b>
<b>Introduction to Part II</b>	<b>207</b>
<b>7 The basics of crossed complexes</b>	<b>209</b>
7.1 Our basic categories and functors . . . . .	211
7.1.i The category of filtered topological spaces . . . . .	211
7.1.ii Modules over groupoids . . . . .	213
7.1.iii The category of crossed complexes . . . . .	214
7.1.iv Homotopy and homology groups of crossed complexes . . . . .	218
7.1.v The fundamental crossed complex functor . . . . .	219
7.1.vi Substructures . . . . .	221
7.1.vii Homotopies of morphisms of crossed complexes . . . . .	224
7.2 Colimits of crossed complexes . . . . .	228
7.2.i Computation of colimits of crossed complexes dimensionwise	229
7.2.ii Groupoid modules bifibred over groupoids . . . . .	230
7.2.iii Crossed modules bifibred over groupoids . . . . .	231
7.3 Free constructions . . . . .	232
7.3.i Free modules over groupoids . . . . .	233
7.3.ii Free crossed modules over groupoids . . . . .	234
7.3.iii Free crossed complexes . . . . .	236
7.4 Crossed complexes and chain complexes . . . . .	239
7.4.i Adjoint module and augmentation module . . . . .	240
7.4.ii The derived module . . . . .	244
7.4.iii The derived chain complex of a crossed complex . . . . .	246
7.4.iv Exactness and lifting properties of the derived functor . . . . .	247
7.4.v The right adjoint of the derived functor . . . . .	250
7.4.vi A colimit in chain complexes with operators . . . . .	252
<b>8 The Higher Homotopy Seifert–van Kampen Theorem (HHSvKT) and its applications</b>	<b>258</b>
8.1 HHSvKT for crossed complexes . . . . .	259
8.2 Some immediate consequences of the HHSvKT . . . . .	262
8.2.i Coproducts with amalgamation . . . . .	262
8.2.ii Pushouts . . . . .	263
8.3 Results on pairs of spaces: induced modules and relative homotopy groups . . . . .	265
8.3.i Specialisation to pairs . . . . .	266
8.3.ii Coproducts with amalgamation . . . . .	267
8.3.iii Induced modules and homotopical excision . . . . .	267
8.3.iv Attaching a cone and the Relative Hurewicz Theorem . . . . .	271
8.4 The chain complex of a filtered space and of a CW-complex . . . . .	274

<b>9 Tensor products and homotopies of crossed complexes</b>	278
9.1 Some exponential laws in topology and algebra . . . . .	280
9.2 Monoidal closed structure on the category of modules over groupoids . . . . .	283
9.3 Monoidal closed structure on the category of crossed complexes . . . . .	287
9.3.i The internal hom structure . . . . .	290
9.3.ii The bimorphisms as an intermediate step . . . . .	294
9.3.iii The tensor product of two crossed complexes . . . . .	295
9.4 Analysis of the tensor product of crossed complexes . . . . .	300
9.4.i The groupoid part of the tensor product . . . . .	300
9.4.ii The crossed module part of the tensor product . . . . .	301
9.5 Tensor products and chain complexes . . . . .	305
9.5.i Monoidal closed structure on chain complexes . . . . .	305
9.5.ii Crossed complexes and chain complexes: relations between the internal homs . . . . .	307
9.6 The tensor product of free crossed complexes is free . . . . .	310
9.7 The monoidal closed category of filtered spaces . . . . .	311
9.8 Tensor products and the fundamental crossed complex . . . . .	313
9.9 The Homotopy Addition Lemma for a simplex . . . . .	315
9.10 Simplicial sets and crossed complexes . . . . .	319
<b>10 Resolutions</b>	324
10.1 Covering morphisms of crossed complexes . . . . .	324
10.1.i Coverings of free crossed complexes . . . . .	328
10.2 Free crossed resolutions . . . . .	329
10.2.i Existence, examples . . . . .	329
10.2.ii Standard free crossed resolution . . . . .	331
10.2.iii Uniqueness up to homotopy . . . . .	332
10.2.iv Some more complex examples: Free products with amalgamation and HNN-extensions . . . . .	336
10.3 From presentations to free crossed resolutions . . . . .	341
10.3.i Home for a contracting homotopy: chain complexes . . . . .	341
10.3.ii Computing a free crossed resolution . . . . .	343
10.4 Acyclic models . . . . .	353
10.4.i The Acyclic Model Theorem . . . . .	354
10.4.ii Simplicial sets and normalisation . . . . .	357
10.4.iii Cubical sets and normalisation . . . . .	358
10.4.iv Relating simplicial and cubical by acyclic models . . . . .	360
10.4.v The Eilenberg–Zilber–Tonks Theorem . . . . .	360
10.4.vi Excision . . . . .	362

<b>11 The cubical classifying space of a crossed complex</b>	368
11.1 The cubical site . . . . .	369
11.1.i The box category . . . . .	369
11.1.ii The category of cubical sets . . . . .	369
11.1.iii Geometric realisation of a cubical set . . . . .	371
11.2 Monoidal closed structure on the category of cubical sets . . . . .	372
11.2.i Tensor product of cubical sets . . . . .	373
11.2.ii Homotopies of cubical maps . . . . .	375
11.2.iii The internal hom functor on cubical sets . . . . .	377
11.3 Homotopy theory of cubical sets . . . . .	379
11.3.i Fibrant cubical sets . . . . .	379
11.3.ii Fibrations of cubical sets . . . . .	382
11.3.iii Homotopy . . . . .	385
11.3.iv An equivalence of cubical and topological homotopy sets . . . . .	386
11.4 Cubical sets and crossed complexes . . . . .	388
11.4.i The fundamental crossed complex of a cubical set . . . . .	388
11.4.ii The cubical nerve of a crossed complex . . . . .	389
11.4.iii The Homotopy Classification Theorem . . . . .	391
11.5 The pointed case . . . . .	392
<b>12 Nonabelian cohomology: spaces, groupoids</b>	396
Introduction . . . . .	396
12.1 Fibrations of crossed complexes . . . . .	397
12.1.i Fibrations of crossed complexes and cubical nerves . . . . .	401
12.1.ii Long exact sequences of a fibration of crossed complexes . . . . .	403
12.2 Homotopy classification of morphisms . . . . .	404
12.3 Homotopy classification of maps of spaces . . . . .	408
12.4 Local coefficients and local systems . . . . .	415
12.5 Cohomology of a groupoid . . . . .	418
12.5.i The cohomology of a cover of a space . . . . .	420
12.6 Dimension 2 cohomology of a group . . . . .	422
12.7 Crossed $n$ -fold extensions and cohomology . . . . .	427
12.8 Concluding remarks to Part II . . . . .	433
<b>III Cubical <math>\omega</math>-groupoids</b>	439
<b>Introduction to Part III</b>	441
<b>13 The algebra of crossed complexes and cubical <math>\omega</math>-groupoids</b>	443
13.1 Connections and compositions in cubical sets . . . . .	445
13.2 $\omega$ -groupoids . . . . .	450
13.3 The crossed complex associated to an $\omega$ -groupoid . . . . .	452

13.4	Folding operations . . . . .	455
13.5	$n$ -shells: coskeleton and skeleton . . . . .	463
13.6	The equivalence of $\omega$ -groupoids and crossed complexes . . . . .	469
13.7	The Homotopy Addition Lemma and properties of thin elements . . . . .	472
<b>14</b>	<b>The cubical homotopy <math>\omega</math>-groupoid of a filtered space</b>	480
14.1	The cubical homotopy groupoid of a filtered space . . . . .	482
14.2	The fibration and deformation theorems . . . . .	487
14.3	The HHSvKT Theorem for $\omega$ -groupoids . . . . .	492
14.4	The HHSvKT for crossed complexes . . . . .	496
14.5	Realisation properties of $\omega$ -groupoids and crossed complexes . . . . .	498
14.6	Free properties . . . . .	500
14.7	Homology and homotopy . . . . .	502
14.7.i	Relative Hurewicz Theorem: dimension 1 . . . . .	504
14.7.ii	Absolute Hurewicz Theorem and Whitehead's exact sequence	505
14.8	The cubical Dold–Kan Theorem . . . . .	508
<b>15</b>	<b>Tensor products and homotopies</b>	513
15.1	Monoidal closed structure on $\omega$ -groupoids . . . . .	514
15.1.i	Relations between the internal homs for cubes and for $\omega$ -groupoids . . . . .	518
15.2	The monoidal closed structure on crossed complexes revisited . . . . .	520
15.2.i	The internal hom on crossed complexes . . . . .	521
15.2.ii	Bimorphisms on crossed complexes . . . . .	525
15.2.iii	The tensor product of crossed complexes . . . . .	529
15.2.iv	Another description of the internal hom in Crs . . . . .	530
15.2.v	Crossed complexes and cubical sets . . . . .	531
15.3	The Eilenberg–Zilber natural transformation . . . . .	532
15.4	The symmetry of tensor products . . . . .	534
15.5	The pointed case . . . . .	536
15.6	Dense subcategories . . . . .	537
15.7	Fibrations and coverings of $\omega$ -groupoids . . . . .	539
15.8	Application to the tensor product of covering morphisms . . . . .	539
<b>16</b>	<b>Future directions?</b>	544
16.1	Problems and questions . . . . .	545

## Appendices

<b>A</b>	<b>A resumé of some category theory</b>	555
A.1	Notation for categories . . . . .	556
A.2	Representable functors . . . . .	557

A.3	Slice and comma categories . . . . .	558
A.4	Colimits and limits . . . . .	559
A.5	Generating objects and dense subcategories . . . . .	563
A.6	Adjoint functors . . . . .	564
A.7	Adjoint functors, limits and colimits . . . . .	566
A.8	Abelianisations of groupoids . . . . .	568
A.9	Coends and ends . . . . .	569
A.10	Simplicial objects . . . . .	571
A.10.i	Crossed complexes, $\omega$ -groupoids and simplicial sets . . . . .	574
<b>B</b>	<b>Fibred and cofibred categories</b>	577
B.1	Fibrations of categories . . . . .	577
B.2	Cofibrations of categories . . . . .	580
B.3	Pushouts and cocartesian morphisms . . . . .	583
B.4	Crossed squares and triad homotopy groups . . . . .	586
B.5	Groupoids bifibred over sets . . . . .	588
B.6	Free groupoids . . . . .	589
B.7	Covering morphisms of groupoids . . . . .	590
B.8	Model categories for homotopy theory . . . . .	594
<b>C</b>	<b>Closed categories</b>	598
C.1	Products of categories and coherence . . . . .	598
C.2	Cartesian closed categories . . . . .	600
C.3	The internal hom for categories and groupoids . . . . .	600
C.4	The monoid of endomorphisms in the case of groupoids . . . . .	602
C.5	The symmetry groupoid and the actor of a groupoid . . . . .	605
C.6	The case of a group . . . . .	606
C.7	Monoidal and monoidal closed categories . . . . .	608
C.8	Crossed modules and quotients of groups . . . . .	612
	<b>Bibliography</b>	615
	<b>Glossary of Symbols</b>	643
	<b>Index</b>	653
