Preface	vii
Notation and conventions	xiii
1 Metric spaces and large scale geometry	1
1.1 Metric spaces	1
1.2 Groups as metric spaces	6
1.3 Quasi-isometries	9
1.4 Coarse equivalences	15
1.5 Hyperbolic spaces	19
Exercises	24
Notes and remarks	25
2 Asymptotic dimension and decomposition complexity	26
2.1 Topological dimension	26
2.2 Asymptotic dimension	27
2.3 Dimension of hyperbolic groups	30
2.4 Upper bounds for asymptotic dimension	32
2.5 Asymptotic dimension of solvable groups	36
2.6 Groups with infinite asymptotic dimension	38
2.7 Decomposition complexity	39
2.8 Invariance and permanence	42
2.9 Groups with finite decomposition complexity	45
Exercises	47
Notes and remarks	47
3 Amenability	49
3.1 Følner conditions	49
3.2 The Hulanicki–Reiter condition	55
3.3 Invariant means	58
Exercises	61
Notes and remarks	61
4 Property A	63
4.1 Definition and basic properties	63
4.2 The Higson–Roe condition	66
4.3 Finite asymptotic dimension implies property A	70

4.4	Property A and residually finite groups	73
4.5	Locally finite examples	78
	Exercises	81
	Notes and remarks	81
5	Coarse embeddings	83
5.1	Coarse embeddings	83
5.2	Embeddability into Hilbert spaces	84
5.3	Examples of embeddable spaces without property A	89
5.4	Convexity and reflexivity	91
5.5	Coarse embeddings and finite subsets	96
5.6	Expanders	98
5.7	A geometric characterization of non-embeddability	101
5.8	Compression of coarse embeddings	108
5.9	Compression $> \frac{1}{2}$ implies property A	110
	Exercises	116
	Notes and remarks	117
6	Group actions on Banach spaces	119
6.1	Affine isometric actions	119
6.2	Metrically proper actions and a-T-menability	121
6.3	Actions on ℓ_p -spaces and reflexive Banach spaces	125
6.4	Kazhdan's property (T)	128
6.5	Fixed points and Kazhdan's property (T)	130
6.6	Construction of expanders	132
6.7	Property (T) and spectral conditions	134
	Exercises	140
	Notes and remarks	141
7	Coarse homology	143
7.1	Coarse locally finite homology	143
7.2	Uniformly finite homology	144
7.3	Eilenberg swindles and Ponzi schemes	149
7.4	Aperiodic tiles and non-amenable spaces	154
7.5	Coarsening homology theories	160
7.6	The coarsening homomorphism	162
	Exercises	165
	Notes and remarks	165

8 Survey of applications	166
8.1 Topological rigidity	166
8.2 Geometric rigidity	167
8.3 Index theory	169
References	172
Index	187
