

Preface

This volume contains my articles on the history of number theory except those which are already included in my “Collected Papers”. All articles have been checked and reedited. Two articles which originally were written in German have been translated. I would like to thank all the people who have helped me to prepare this volume, foremost Keith Conrad and also Milena Hering who have streamlined my translation.

Particular thanks go to my wife Erika who has meticulously read and corrected the whole manuscript.
