Preface	v
<b>0 Introduction</b>	1
<b>1 The Laplacian</b>	7
1.1 Laplace and Poisson equations . . . . .	7
1.2 Mean value property . . . . .	11
1.3 Quantitative maximum principle . . . . .	15
<b>2 Poisson equation</b>	21
2.1 Finite measures . . . . .	21
2.2 Distributional solutions . . . . .	28
2.3 Superharmonic functions . . . . .	33
<b>3 Integrable versus measure data</b>	39
3.1 Linear Dirichlet problem . . . . .	39
3.2 Nonlinear Dirichlet problem . . . . .	44
<b>4 Variational approach</b>	49
4.1 Sobolev spaces . . . . .	49
4.2 Minimizers and the Euler–Lagrange equation . . . . .	62
4.3 Thomas–Fermi energy functional . . . . .	70
<b>5 Linear regularity theory</b>	77
5.1 Embedding in Sobolev spaces . . . . .	77
5.2 Weak Lebesgue functions . . . . .	84
5.3 Critical estimates . . . . .	87
5.4 Compactness in Sobolev spaces . . . . .	91
<b>6 Comparison tools</b>	95
6.1 Weak maximum principle . . . . .	95
6.2 Variants of Kato’s inequality . . . . .	99
6.3 Localization properties . . . . .	104
6.4 Inverse maximum principle . . . . .	106

<b>7 Balayage</b>	<b>111</b>
7.1 Weak normal derivative . . . . .	111
7.2 Finite charge up to the boundary . . . . .	117
<b>8 Precise representative</b>	<b>123</b>
8.1 Lebesgue's differentiation theorem . . . . .	123
8.2 Sobolev functions . . . . .	128
8.3 Potentials . . . . .	131
8.4 Kato's inequality revisited . . . . .	134
<b>9 Maximal inequalities</b>	<b>139</b>
9.1 Integral estimate . . . . .	139
9.2 Energy estimate . . . . .	143
9.3 Total charge estimate . . . . .	150
<b>10 Sobolev and Hausdorff capacities</b>	<b>155</b>
10.1 Comparison properties . . . . .	155
10.2 Estimating the Sobolev capacity . . . . .	156
10.3 Estimating the Hausdorff content . . . . .	162
<b>11 Removable singularities</b>	<b>171</b>
11.1 Schwarz's principle . . . . .	171
11.2 Polar sets of second order . . . . .	175
11.3 Carleson's condition . . . . .	176
<b>12 Obstacle problems</b>	<b>181</b>
12.1 Comparison between capacities . . . . .	181
12.2 Perron–Remak method . . . . .	188
12.3 Total charge and energy minimizations . . . . .	195
<b>13 Families of solutions</b>	<b>205</b>
13.1 Bounded functions . . . . .	205
13.2 Lebesgue integrable classes . . . . .	207
13.3 Hölder-continuous solutions . . . . .	209
<b>14 Strong approximation of measures</b>	<b>215</b>
14.1 Capacitary and density bounds . . . . .	215
14.2 Radon–Nikodým and Lebesgue decompositions . . . . .	219
14.3 Perturbation of diffuse measures . . . . .	225
14.4 Precise density bound . . . . .	227

<b>15 Traces of Sobolev functions</b>	235
15.1 Existence of the trace . . . . .	235
15.2 Fractional Sobolev embedding . . . . .	241
15.3 Range of the trace operator . . . . .	251
<b>16 Trace inequality</b>	257
16.1 Capacitary, geometric and pointwise interpretations . . . . .	257
16.2 Hölder continuity revisited . . . . .	263
16.3 Delocalization of capacitary measures . . . . .	271
<b>17 Critical embedding</b>	275
17.1 Bounded mean oscillation . . . . .	275
17.2 Brezis–Merle inequality and beyond . . . . .	278
17.3 Exponential Sobolev embedding . . . . .	287
17.4 $W^{1,2}$ and $W^{2,1}$ capacities . . . . .	291
<b>18 Quasicontinuity</b>	299
18.1 Continuous potentials . . . . .	299
18.2 Lusin property . . . . .	303
18.3 Continuity principle . . . . .	306
<b>19 Nonlinear problems with diffuse measures</b>	311
19.1 Unconditional existence . . . . .	311
19.2 Measures must be diffuse . . . . .	315
<b>20 Extremal solutions</b>	321
20.1 Boundary data revisited . . . . .	321
20.2 Method of sub- and supersolutions . . . . .	327
20.3 Nonlinear Perron–Remak method . . . . .	332
<b>21 Absorption problems</b>	337
21.1 Subcritical case . . . . .	337
21.2 Contraction and stability . . . . .	341
21.3 Polynomial growth . . . . .	344
21.4 Exponential growth . . . . .	347
<b>22 The Schrödinger operator</b>	351
22.1 Strong maximum principle . . . . .	351
22.2 Existence of solutions with measure data . . . . .	356
22.3 The bridge . . . . .	360

## Appendices

<b>A Sobolev capacity</b>	367
A.1 Finite semi-additivity . . . . .	367
A.2 Outer capacity and pointwise convergence . . . . .	371
A.3 Strong additivity . . . . .	376
A.4 Measures on dual Sobolev spaces . . . . .	381
<b>B Hausdorff measure</b>	385
B.1 Density estimate . . . . .	385
B.2 Frostman's lemma . . . . .	388
B.3 Regularity and uniform approximation . . . . .	391
<b>C Solutions and hints to the exercises</b>	395
Bibliography	415
Index	449
