Preface . . . . .	v
1 Models on finite probability spaces . . . . .	1
2 Utility maximization under transaction costs: The case of finite $\Omega$ . . . . .	15
3 Growth-optimal portfolio in the Black–Scholes model . . . . .	31
3.1 The frictionless case . . . . .	31
3.2 Passing to transaction costs: Some heuristics . . . . .	34
3.3 The case $0 < \theta < 1$ . . . . .	37
3.4 Heuristic construction of the shadow price process . . . . .	42
3.5 Formulation of the theorem . . . . .	47
3.6 Formulation of the optimization problem . . . . .	51
3.7 The case $\theta \geq 1$ . . . . .	53
3.8 Optimal growth rate . . . . .	56
3.9 Primal versus dual approach . . . . .	57
3.10 Rogers’ qualitative argument . . . . .	63
3.11 Almost-sure optimal growth rate and a numerical example . . . . .	64
4 General duality theory . . . . .	67
4.1 Passage from $L^0$ to appropriate Banach spaces . . . . .	81
4.2 Dual variables . . . . .	84
4.3 Nonnegative claims . . . . .	88
5 Local duality theory . . . . .	93
5.1 The frictionless case . . . . .	93
5.2 The case of proportional transaction costs . . . . .	102
6 Portfolio optimization under transaction costs . . . . .	111
7 Shadow price process . . . . .	123
8 Case study: Fractional Brownian motion . . . . .	127

Appendix . . . . .	135
A.1 Polar sets . . . . .	135
A.2 Polyhedral sets . . . . .	137
A.3 Legendre transformation . . . . .	140
Bibliography . . . . .	143
Index . . . . .	149
