Introduction	ix
VII Hereditary algebras	1
1 The quiver of an algebra	2
2 The tensor algebras of species	19
3 Exact sequences	29
4 The Euler forms	53
5 The Coxeter transformation	75
6 Postprojective and preinjective components	82
7 Hereditary algebras of Dynkin type	96
8 Hereditary algebras of Euclidean type	111
9 Hereditary algebras of wild type	158
10 Representations of bimodules	197
11 Exercises	205
VIII Tilted algebras	217
1 Torsion pairs	218
2 Tilting modules	225
3 The Brenner–Butler theorem	242
4 Connecting sequences	284
5 Splitting tilting modules	294
6 Tilted algebras	301
7 The criterion of Liu and Skowroński	346
8 Reflections of hereditary algebras	362
9 The theorem of Ringel on regular tilting modules	367
10 Exercises	385
IX Auslander–Reiten components	407
1 Functors on module categories	407
2 The Igusa–Todorov theorem	422
3 Degrees of irreducible homomorphisms	428
4 Stable Auslander–Reiten components	442
5 Generalized standard Auslander–Reiten components	453
6 Stable equivalence	456
7 Exercises	469

X	Selfinjective Hochschild extension algebras	477
1	Hochschild cohomology spaces	477
2	Hochschild extension algebras	479
3	Hochschild extensions by duality modules	488
4	Non-Frobenius selfinjective Hochschild extensions	505
5	Hochschild extension algebras of finite field extensions	517
6	Hochschild extension algebras of path algebras	529
7	Hochschild extension algebras of hereditary algebras	540
8	The Auslander–Reiten quivers of Hochschild extension algebras	553
9	Exercises	601
	Bibliography	611
	Index	617
