Preface . . . . .	v
1 Introduction . . . . .	1
1.1 Kervaire's six papers on knot theory . . . . .	1
1.2 A brief description of the content of the book . . . . .	2
1.3 What is a knot? . . . . .	3
1.4 Knots in the early 1960s . . . . .	4
1.5 Higher-dimensional knots and homotopy spheres . . . . .	4
1.6 Links and singularities . . . . .	5
1.7 Final remarks . . . . .	6
1.8 Conventions and notation . . . . .	7
2 Some tools of differential topology . . . . .	9
2.1 Surgery from an elementary point of view . . . . .	9
2.2 Vector bundles and parallelizability . . . . .	10
2.3 The Pontrjagin method and the $J$ -homomorphism . . . . .	11
3 The Kervaire–Milnor study of homotopy spheres . . . . .	15
3.1 Homotopy spheres . . . . .	15
3.2 The groups $\Theta^n$ and $bP^{n+1}$ . . . . .	15
3.3 The Kervaire invariant . . . . .	20
3.4 The groups $P^{n+1}$ . . . . .	22
3.5 The Kervaire manifold . . . . .	24
4 Differentiable knots in codimension $\geq 3$ . . . . .	27
4.1 On the isotopy of knots and links in any codimension . . . . .	27
4.2 Embeddings and isotopies in the stable and metastable ranges . . . . .	28
4.3 Below the metastable range . . . . .	29
5 The fundamental group of a knot complement . . . . .	33
5.1 Homotopy $n$ -spheres embedded in $S^{n+2}$ . . . . .	33
5.2 Necessary conditions to be the fundamental group of a knot complement . . . . .	35
5.3 Sufficiency of the conditions if $n \geq 3$ . . . . .	37
5.4 The Kervaire conjecture . . . . .	40
5.5 Groups that satisfy the Kervaire conditions . . . . .	41

---

6	Knot modules . . . . .	43
6.1	The knot exterior . . . . .	43
6.2	Some algebraic properties of knot modules . . . . .	45
6.3	The $q$ th knot module when $q < n/2$ . . . . .	48
6.4	Seifert hypersurfaces . . . . .	50
6.5	Odd-dimensional knots and the Seifert form . . . . .	52
6.6	Even-dimensional knots and the torsion Seifert form . . . . .	56
7	Odd-dimensional simple links . . . . .	61
7.1	$q$ -handlebodies . . . . .	61
7.2	The realization theorem for Seifert matrices . . . . .	62
7.3	Levine's classification of embeddings of handlebodies in codimension 1 . . . . .	65
7.4	Levine's classification of simple odd-dimensional knots . . . . .	67
8	Knot cobordism . . . . .	69
8.1	Definitions . . . . .	69
8.2	The even-dimensional case . . . . .	69
8.3	The odd-dimensional case . . . . .	71
9	Singularities of complex hypersurfaces . . . . .	75
9.1	The theory of Milnor . . . . .	75
9.2	Algebraic links and Seifert forms . . . . .	78
9.3	Cobordism of algebraic links . . . . .	79
9.4	Examples of Seifert matrices associated to algebraic links . . . . .	80
9.5	Mumford and topological triviality . . . . .	81
9.6	Joins and Pham–Brieskorn singularities . . . . .	83
9.7	The paper by Kauffman [56] . . . . .	86
9.8	The paper by Kauffman and Neumann [57] . . . . .	87
9.9	Kauffman–Neumann's construction when both links are the binding of an open book decomposition . . . . .	88
A	Linking numbers and signs . . . . .	91
A.1	The boundary of an oriented manifold . . . . .	91
A.2	Linking numbers . . . . .	92
B	Existence of Seifert hypersurfaces . . . . .	93
C	Open book decompositions . . . . .	95
C.1	Open books . . . . .	95
C.2	Browder's lemma 2 . . . . .	96

---

D	Handlebodies and plumbings . . . . .	99
D.1	Bouquets of spheres and handlebodies . . . . .	99
D.2	Parallelizable handlebodies . . . . .	101
D.3	$m$ -dimensional spherical links in $S^{2m+1}$ . . . . .	103
D.4	Plumbing . . . . .	104
E	Homotopy spheres embedded in codimension 2 and the Kervaire–Arf– Robertello–Levine invariant . . . . .	109
E.1	Which homotopy spheres can be embedded in codimension 2? . . . . .	109
E.2	The Kervaire–Arf–Robertello–Levine invariant . . . . .	111
E.3	The Hill–Hopkins–Ravenel result and its influence on the KARL invariant . . . . .	112
F	Figures . . . . .	115
	Bibliography . . . . .	121
	Index of Notation . . . . .	129
	Index of Quoted Theorems . . . . .	131
	Index of Terminology . . . . .	133
