Introduction	1
I A few words on the classical Lie theory	13
1 From Lie groups to Lie algebras	15
2 Finite-dimensional (real or complex) Lie algebras	19
2.1 A few definitions	19
2.2 Levi decomposition	21
2.3 Semisimple Lie algebras	22
2.4 Classification of simple Lie algebras	25
II Kac–Moody algebras	35
3 Basic definitions	37
3.1 Preliminaries: presentations and enveloping algebra of a Lie algebra	37
3.2 Towards Kac–Moody algebras	39
3.3 Generalised Cartan matrices	40
3.4 Gradations	40
3.5 Realisations of GCM and Kac–Moody algebras	41
3.6 Simplicity of Kac–Moody algebras	49
3.7 The invariant bilinear form	51
4 The Weyl group of a Kac–Moody algebra	57
4.1 Integrable modules	57
4.2 The Weyl group of $\mathfrak{g}(A)$	63
4.3 Geometry of the Weyl group	72
5 Kac–Moody algebras of finite and affine type	75
5.1 Types of generalised Cartan matrices	75
5.2 Kac–Moody algebras of finite type	78
5.3 Kac–Moody algebras of affine type*	79
6 Real and imaginary roots	89
6.1 Real roots	89
6.2 Imaginary roots	90

III	Kac–Moody groups	97
7	Minimal Kac–Moody groups	101
7.1	Towards Kac–Moody groups	101
7.1.1	Some motivations from the classical theory	101
7.1.2	A few attempts to construct Kac–Moody groups	102
7.2	A \mathbb{Z} -form of the universal enveloping algebra of $\mathfrak{g}(A)$	105
7.3	Kac–Moody root data and associated tori	111
7.3.1	Kac–Moody root data	111
7.3.2	Extensions of Kac–Moody root data*	116
7.3.3	The split torus scheme	122
7.4	The constructive Tits functor	126
7.4.1	A few words on the classical theory	127
7.4.2	Kac–Moody groups via representations	130
7.4.3	Working out relations	132
7.4.4	First properties of $\mathfrak{G}_{\mathcal{D}}$	138
7.4.5	Functoriality of $\mathfrak{G}_{\mathcal{D}}$ in the Kac–Moody root datum*	144
7.4.6	Geometry of the constructive Tits functor over fields	147
7.5	In search of axioms	150
7.6	Affine Kac–Moody groups*	160
8	Maximal Kac–Moody groups	173
8.1	Motivation and basic constructions	173
8.1.1	Motivation	173
8.1.2	Some maximal Kac–Moody groups over \mathbb{C}	174
8.1.3	Maximal Kac–Moody groups over a ring k : the basic idea	180
8.2	Geometric completion	186
8.3	Representation-theoretic completion	190
8.4	Algebraic completion	197
8.5	Scheme-theoretic completion	205
8.5.1	The affine group scheme $\mathcal{U}_A^{\text{ma}+}$	206
8.5.2	Twisted exponentials	211
8.5.3	Functoriality of $\mathcal{U}_A^{\text{ma}+}$ in the generalised Cartan matrix*	230
8.5.4	The scheme-theoretic completion of $\mathfrak{G}_{\mathcal{D}}(k)$	232
8.5.5	The closure of $\mathfrak{G}_{\mathcal{D}}(\mathbb{K})$ in $\mathfrak{G}_{\mathcal{D}}^{\text{sch}}(\mathbb{K})$	241
8.6	Comparisons and GK-simplicity	248
8.7	The maximal Kac–Moody group functor $\mathfrak{G}_{\mathcal{D}}^{\text{pma}}$	259
8.8	The minimal Kac–Moody group functor $\mathfrak{G}_{\mathcal{D}}^{\text{min}}$	264
9	Loose ends	269
9.1	Simplicity of Kac–Moody groups	269
9.2	Isomorphism problem for Kac–Moody groups	271
9.3	Linearity problem for Kac–Moody groups	274
9.4	Kac–Moody groups and locally compact groups	276

A	Group schemes	277
A.1	The language of categories	277
A.2	Affine group schemes	279
A.2.1	Linear algebraic groups and affine group schemes	280
A.2.2	Hopf algebras	281
B	Buildings and BN-pairs	289
B.1	Coxeter groups and complexes	289
B.1.1	Finite reflection groups and their associated poset	289
B.1.2	Simplicial complexes	290
B.1.3	A group theoretic reconstruction of Σ	291
B.1.4	Coxeter groups and complexes	292
B.1.5	The geometry of Coxeter complexes	296
B.2	Buildings	300
B.3	BN-pairs	301
B.3.1	Strongly transitive actions on buildings	302
B.3.2	BN-pairs and associated buildings	303
B.3.3	Twin and refined BN-pairs	308
B.4	Root group data	311
	Bibliography	315
	Index	321
	Index of symbols	325
