<b>1</b>	<b>Introduction</b>	1
1.1	Introduction . . . . .	1
1.2	Content . . . . .	2
1.3	Notation . . . . .	5
<b>2</b>	<b>Free Klein–Gordon fields on Minkowski spacetime</b>	7
2.1	Minkowski spacetime . . . . .	7
2.2	The Klein–Gordon equation . . . . .	9
2.3	Pre-symplectic space of test functions . . . . .	12
2.4	The complex case . . . . .	14
<b>3</b>	<b>Fock quantization on Minkowski space</b>	15
3.1	Bosonic Fock space . . . . .	15
3.2	Fock quantization of the Klein–Gordon equation . . . . .	17
3.3	Quantum spacetime fields . . . . .	18
3.4	Local algebras . . . . .	19
<b>4</b>	<b>CCR algebras and quasi-free states</b>	21
4.1	Vector spaces . . . . .	21
4.2	Bilinear and sesquilinear forms . . . . .	22
4.3	Algebras . . . . .	23
4.4	States . . . . .	24
4.5	CCR algebras . . . . .	25
4.6	Quasi-free states . . . . .	26
4.7	Covariances of quasi-free states . . . . .	30
4.8	The GNS representation of quasi-free states . . . . .	33
4.9	Pure quasi-free states . . . . .	37
4.10	Examples . . . . .	41
<b>5</b>	<b>Free Klein–Gordon fields on curved spacetimes</b>	43
5.1	Background . . . . .	43
5.2	Lorentzian manifolds . . . . .	47
5.3	Stationary and static spacetimes . . . . .	52
5.4	Globally hyperbolic spacetimes . . . . .	52
5.5	Klein–Gordon equations on Lorentzian manifolds . . . . .	57
5.6	Symplectic spaces . . . . .	61

<b>6</b>	<b>Quasi-free states on curved spacetimes</b>	65
6.1	Quasi-free states on curved spacetimes	65
6.2	Consequences of unique continuation	68
6.3	Conformal transformations	69
<b>7</b>	<b>Microlocal analysis of Klein–Gordon equations</b>	71
7.1	Wavefront set of distributions	71
7.2	Operations on distributions	74
7.3	Hörmander’s theorem	76
7.4	The distinguished parametrices of a Klein–Gordon operator	77
<b>8</b>	<b>Hadamard states</b>	81
8.1	The need for renormalization	81
8.2	Old definition of Hadamard states	83
8.3	The microlocal definition of Hadamard states	85
8.4	The theorems of Radzikowski	86
8.5	The Feynman inverse associated to a Hadamard state	88
8.6	Conformal transformations	88
8.7	Equivalence of the two definitions	88
8.8	Examples of Hadamard states	90
8.9	Existence of Hadamard states	91
<b>9</b>	<b>Vacuum and thermal states on stationary spacetimes</b>	93
9.1	Ground states and KMS states	93
9.2	Klein–Gordon operators	97
9.3	The Klein–Gordon equation on stationary spacetimes	99
9.4	Reduction	100
9.5	Ground and KMS states for $P$	101
9.6	Hadamard property	102
<b>10</b>	<b>Pseudodifferential calculus on manifolds</b>	103
10.1	Pseudodifferential calculus on $\mathbb{R}^n$	103
10.2	Pseudodifferential operators on a manifold	106
10.3	Riemannian manifolds of bounded geometry	108
10.4	The Shubin calculus	111
10.5	Time-dependent pseudodifferential operators	113
10.6	Seeley’s theorem	113
10.7	Egorov’s theorem	114
<b>11</b>	<b>Construction of Hadamard states by pseudodifferential calculus</b>	115
11.1	Hadamard condition on Cauchy surface covariances	115
11.2	Model Klein–Gordon operators	116
11.3	Parametrices for the Cauchy problem	117
11.4	The pure Hadamard state associated to a microlocal splitting	123

11.5	Spacetime covariances and Feynman inverses . . . . .	123
11.6	Klein–Gordon operators on Lorentzian manifolds of bounded geometry . . . . .	125
11.7	Conformal transformations . . . . .	126
11.8	Hadamard states on general spacetimes . . . . .	127
<b>12</b>	<b>Analytic Hadamard states and Wick rotation</b>	129
12.1	Boundary values of holomorphic functions . . . . .	130
12.2	The analytic wavefront set . . . . .	131
12.3	Analytic Hadamard states . . . . .	133
12.4	The Reeh–Schlieder property of analytic Hadamard states . . . . .	134
12.5	Existence of analytic Hadamard states . . . . .	135
12.6	Wick rotation on analytic spacetimes . . . . .	136
12.7	The Calderón projectors . . . . .	137
12.8	The Hadamard state associated to Calderón projectors . . . . .	138
12.9	Examples . . . . .	140
<b>13</b>	<b>Hadamard states and characteristic Cauchy problem</b>	143
13.1	Klein–Gordon fields inside future lightcones . . . . .	143
13.2	The boundary symplectic space . . . . .	145
13.3	The Hadamard condition on the boundary . . . . .	147
13.4	Construction of pure boundary Hadamard states . . . . .	150
13.5	Asymptotically flat spacetimes . . . . .	151
13.6	The canonical symplectic space on $\mathcal{I}^-$ . . . . .	154
<b>14</b>	<b>Klein–Gordon fields on spacetimes with Killing horizons</b>	159
14.1	Spacetimes with bifurcate Killing horizons . . . . .	160
14.2	Klein–Gordon fields . . . . .	162
14.3	Wick rotation . . . . .	162
14.4	The double $\beta$ -KMS state in $\mathcal{M}^+ \cup \mathcal{M}^-$ . . . . .	164
14.5	The extended Euclidean metric and the Hawking temperature . . . . .	165
14.6	The Hartle–Hawking–Israel state . . . . .	166
<b>15</b>	<b>Hadamard states and scattering theory</b>	169
15.1	Klein–Gordon operators on asymptotically static spacetimes . . . . .	169
15.2	The <i>in</i> and <i>out</i> vacuum states . . . . .	171
15.3	Reduction to a model case . . . . .	173
<b>16</b>	<b>Feynman propagator on asymptotically Minkowski spacetimes</b>	177
16.1	Klein–Gordon operators on asymptotically Minkowski spacetimes . . . . .	178
16.2	The Feynman inverse of $P$ . . . . .	178
16.3	Proof of Theorem 16.1 . . . . .	180

<b>17 Dirac fields on curved spacetimes</b>	187
17.1 CAR $*$ -algebras and quasi-free states	187
17.2 Clifford algebras	188
17.3 Clifford representations	189
17.4 Spin groups	192
17.5 Weyl bi-spinors	192
17.6 Clifford and spinor bundles	194
17.7 Spin structures	196
17.8 Spinor connections	197
17.9 Dirac operators	198
17.10 Dirac equation on globally hyperbolic spacetimes	200
17.11 Quantization of the Dirac equation	201
17.12 Hadamard states for the Dirac equation	202
17.13 Conformal transformations	203
17.14 The Weyl equation	204
17.15 Relationship between Dirac and Weyl Hadamard states	206
<b>Bibliography</b>	209
<b>General Index</b>	215
<b>Index of Notations</b>	219
