

EMS Monographs in Mathematics

Edited by

Hugo Duminil-Copin (Institut des Hautes Études Scientifiques (IHÉS), Bures-sur-Yvette, France) Gerard van der Geer (University of Amsterdam, The Netherlands) Thomas Kappeler (University of Zürich, Switzerland) Paul Seidel (Massachusetts Institute of Technology, Cambridge, USA)

EMS Monographs in Mathematics is a book series aimed at mathematicians and scientists. It publishes research monographs and graduate level textbooks from all fields of mathematics. The individual volumes are intended to give a reasonably comprehensive and selfcontained account of their particular subject. They present mathematical results that are new or have not been accessible previously in the literature.

Previously published in this series:

Richard Arratia, A.D. Barbour and Simon Tavaré, *Logarithmic Combinatorial Structures: A Probabilistic Approach* Demetrios Christodoulou, *The Formation of Shocks in 3-Dimensional Fluids* Sergei Buyalo and Viktor Schroeder, *Elements of Asymptotic Geometry* Demetrios Christodoulou, *The Formation of Black Holes in General Relativity* Joachim Krieger and Wilhelm Schlag, *Concentration Compactness for Critical Wave Maps* Jean-Pierre Bourguignon, Oussama Hijazi, Jean-Louis Milhorat, Andrei Moroianu and Sergiu Moroianu, *A Spinorial Approach to Riemannian and Conformal Geometry* Kazuhiro Fujiwara and Fumiharu Kato, *Foundations of Rigid Geometry I* Demetrios Christodoulou, *The Shock Development Problem* Diogo Arsénio and Laure Saint-Raymond, *From the Vlasov–Maxwell–Boltzmann System to Incompressible Viscous Electro-magneto-hydrodynamics, Vol. 1* Paul Balmer Ivo Dell'Ambrogio

Mackey 2–Functors and Mackey 2–Motives
