Introduction	1
1 Survey of results	7
1.1 The definition of Mackey 2-functors	7
1.2 Rectification	11
1.3 Separable monadicity	14
1.4 Mackey 2-functors and Grothendieck derivators	15
1.5 Mackey 2-motives	16
1.6 Pointers to related works	18
2 Mackey 2-functors	19
2.1 Comma and iso-comma squares	19
2.2 Mackey squares	23
2.3 General Mackey 2-functors	25
2.4 Separable monadicity	28
2.5 Decategorification	29
3 Rectification and ambidexterity	33
3.1 Self iso-commas	33
3.2 Comparing the legs of a self iso-comma	39
3.3 The canonical morphism Θ from left to right adjoint	41
3.4 Rectification of Mackey 2-functors	58
4 Examples	63
4.1 Examples from additive derivators	63
4.2 Mackey sub-2-functors and quotients	66
4.3 Extending examples from groups to groupoids	68
4.4 Mackey 2-functors of equivariant objects	72
5 Bicategories of spans	81
5.1 Spans in a $(2,1)$ -category	81
5.2 The universal property of spans	95
5.3 Bicategorical upgrades of the universal property	106
5.4 Pullback of 2-cells in the bicategory of spans	113
5.5 Heuristic account and the 2-dual version	122
6 Mackey 2-motives	131
6.1 Mackey 2-motives and their universal property	131
6.2 A strict presentation and a calculus of string diagrams	143
6.3 The bicategory of Mackey 2-functors	150

7 Additive Mackey 2-motives and decompositions	155
7.1 Additive Mackey 2-motives	155
7.2 The Yoneda 2-embedding	159
7.3 Presheaves over a Mackey 2-functor	161
7.4 Crossed Burnside rings and Mackey 2-motives	163
7.5 Motivic decompositions of Mackey 2-functors	171
Appendix A: Categorical reminders	175
A.1 Bicatagories and 2-categories	175
A.2 Mates	182
A.3 String diagrams	187
A.4 How to read string diagrams in this book	194
A.5 The ordinary category of spans	197
A.6 Additivity for categories	199
A.7 Additivity for bicategories	203
Appendix B: Ordinary Mackey functors on a given group	215
Bibliography	221
Index	225
