Preface v

1 Introduction 1

2 Moment functionals on $\mathbb{P}$ and orthogonal polynomials 3
2.1 Existence of orthogonal polynomial sequences 10
2.2 Three-term recurrence relation 13
2.3 Christoffel–Darboux kernel polynomials 19
2.4 Polynomials of the first kind and the Stieltjes function 21

3 Continued fractions 27
3.1 Continued fractions and orthogonal polynomials 28

4 Zeros of orthogonal polynomials 31
4.1 The interlacing property of zeros 32

5 Gauss quadrature rules 37

6 Symmetric functionals 43
6.1 LU factorization 45

7 Transformations of moment functionals 49
7.1 Canonical Christoffel transformation 49
7.2 Canonical Geronimus transformation 54
7.3 Uvarov transformation 59

8 Classical orthogonal polynomials 63
8.1 The linear differential operator and its solutions 64
8.2 Weight function and inner product 65

9 Classical functionals 69

10 Electrostatic interpretation for the zeros of classical orthogonal polynomials 85
10.1 Equilibrium points on a bounded interval with charged end points . . . 85
10.2 Equilibrium points on the complex plane: The Bessel case 87
10.3 Classical orthogonal polynomials and the inverse problem 89

11 Semiclassical functionals 91

12 Examples of semiclassical orthogonal polynomials 105

13 The Askey scheme 109
13.1 Hahn polynomials 110
13.2 Jacobi polynomials 110
13.3 Meixner polynomials 110
13.4 Krawtchouk polynomials 111
13.5 Laguerre polynomials 111
13.6 Bessel polynomials 111
13.7 Charlier polynomials 112
13.8 Hermite polynomials 112
13.9 Limit relations 112
