Introduction	1
I A panorama of topology, geometry and algebra	19
1 Basics on free loop spaces	21
<i>David Chataur and Alexandru Oancea</i>	
2 Morse theory, closed geodesics, and the homology of free loop spaces	67
<i>Alexandru Oancea</i>	
3 Rational homotopy – Sullivan models	111
<i>Luc Menichi</i>	
4 Free loop space and homology	137
<i>Jean-Louis Loday</i>	
5 Appendix to the chapter by J.-L. Loday	157
<i>Janko Latschev</i>	
6 On algebraic structures of the Hochschild complex	165
<i>Hossein Abbaspour</i>	
7 Basic rational string topology	223
<i>Yves Félix</i>	
8 Fukaya’s work on Lagrangian embeddings	243
<i>Janko Latschev</i>	
II Symplectic cohomology and Viterbo’s theorem	271
<i>Mohammed Abouzaid</i>	
9 Symplectic cohomology of cotangent bundles	279
10 Operations in symplectic cohomology	323
11 String topology using piecewise geodesics	355

12 From symplectic cohomology to loop homology	377
13 Viterbo's theorem: surjectivity	405
14 Viterbo's theorem: isomorphism	455
Bibliography to Part II	481
List of contributors	487
