Preface v

Introduction ix

1 Motivation and preliminaries 1
- 1.1 Motivation: Navier–Stokes equations . . . 1
- 1.2 Heat kernels . . . 4
- 1.3 Types of norms, homogeneity . . . 5

2 Spaces on $\dot{S}'(\mathbb{R}^n)$ 7
- 2.1 Basic definitions . . . 7
- 2.2 The spaces $\dot{S}(\mathbb{R}^n)$ and $\dot{S}'(\mathbb{R}^n)$ . . . 9
- 2.3 Definitions . . . 11
- 2.4 Descriptions in terms of heat kernels . . . 13
- 2.5 Further equivalent norms . . . 17
- 2.6 Further tempered homogeneous spaces . . . 26
  - 2.6.1 Anisotropic spaces . . . 27
  - 2.6.2 Hybrid spaces . . . 28
  - 2.6.3 Dominating mixed smoothness . . . 31
  - 2.6.4 Weighted spaces . . . 36
  - 2.6.5 Radial spaces . . . 41
  - 2.6.6 Further comments . . . 43

3 New approach 45
- 3.1 Spaces with negative smoothness . . . 45
- 3.2 Further properties . . . 51
- 3.3 Spaces with positive smoothness . . . 57
- 3.4 Duality . . . 62
- 3.5 Interpolation . . . 66
- 3.6 Lorentz spaces . . . 68
- 3.7 Spaces with positive smoothness, revisited . . . 72
- 3.8 Spaces with general smoothness . . . 76
- 3.9 Haar bases . . . 81

3.10 Pointwise multipliers 88
3.11 Truncations 91
3.12 Harmonic norms 95
3.13 Norms based on differences and derivatives 96
3.14 Lifts and further domestic norms 97
3.15 Lizorkin representations 98
3.16 Traces 100
3.17 Spaces on domains 104
3.18 Diversity 108
3.19 Beyond the distinguished strip, I 109
3.20 Beyond the distinguished strip, II 111
3.21 Local homogeneity for inhomogeneous spaces 115
3.22 On the q-dependence of some properties of $F^s_{p,q}$-spaces 118
