

Contents

1	Asymptotic formulas for modular forms and related functions	1
	<i>Kathrin Bringmann</i>	
1	Introduction	1
2	Classical modular forms	2
3	Weakly holomorphic modular forms	11
4	Mock modular forms	17
5	Mixed mock modular forms	25
	Bibliography	29
2	Expansions of algebraic numbers	31
	<i>Yann Bugeaud</i>	
1	Representation of real numbers	31
2	Combinatorics on words and complexity	34
3	Complexity of algebraic numbers	37
4	Combinatorial transcendence criteria	38
5	Continued fractions	40
6	Diophantine approximation	45
7	Sketch of proof and historical comments	47
8	A combinatorial lemma	50
9	Proof of Theorem 4.1	52
10	Proof of Theorem 4.2	55
11	A transcendence criterion for quasi-palindromic continued fractions	63
12	Complements	66
13	Further notions of complexity	69
	Bibliography	72
3	Multiplicative Toeplitz matrices and the Riemann zeta function	77
	<i>Titus Hilberdink</i>	
1	Introduction	77
2	Toeplitz matrices and operators – a brief overview	80
3	Bounded multiplicative Toeplitz matrices and operators	85
4	Unbounded multiplicative Toeplitz operators and matrices	99
5	Connections to matrices of the form $(f(ij/(i, j)^2))_{i, j \leq N}$	118
	Bibliography	120

4	Arithmetical topics in algebraic graph theory	123
	<i>Jürgen Sander</i>	
1	Introduction	123
2	Some (algebraic) graph theory	124
3	The prime number theorem for graphs	136
4	Spectral properties of integral circulant graphs	159
	Bibliography	183
Index	187
