## **Empirical and Quantile Processes in the Asymptotic Theory of Goodness-of-fit Tests**

1	Introduction .....	1
2	Testing fit to a fixed distribution .....	2
2.1	Some notes on principal component decompositions of quadratic statistics .....	9
3	Some tools from empirical processes theory .....	12
3.1	Some inequalities .....	12
3.2	The Central Limit Theorem .....	16
3.3	Strong approximations .....	21
4	Testing fit to a family of distributions .....	30
4.1	Adaptation of tests coming from the fixed-distribution setup ...	31
4.2	The empirical process with estimated parameters .....	35
4.3	Correlation and regression tests .....	40
5	Tests based on Wasserstein distance .....	44
6	Asymptotics for $L_2$ -functionals of the quantile process .....	49
6.1	Weak convergence of $L_2$ linear combinations of exponential r.v.'s .....	53
6.2	Weak convergence of weighted $L_2$ functionals of the quantile process .....	67
6.3	Weighted Wasserstein tests of fit to location-scale families of distributions .....	82
	References .....	87

*Paul Deheuvels*

## **Topics on Empirical Processes**

1	Introduction, notation and preliminaries .....	93
1.1	Introduction .....	93
1.2	Distribution and quantile functions .....	94
1.3	Topologies on spaces of measures and functions .....	98
1.4	The quantile transform .....	108

2	Fluctuations of partial sums .....	114
2.1	Some large deviations theory .....	114
2.2	Martingale inequalities .....	118
2.3	Some useful examples of large deviation inequalities .....	126
2.4	Strong approximations of partial sums of i.i.d. random variables .....	129
2.5	The Erdős-Rényi theorem .....	132
3	Empirical processes .....	136
3.1	Uniform empirical distribution and quantile functions .....	136
3.2	Uniform empirical and quantile processes .....	140
3.3	Some further martingale inequalities .....	142
3.4	Relations between empirical and Poisson processes .....	144
3.5	Strong approximations of empirical and quantile processes .....	148
3.6	Some results for weighted processes .....	151
3.7	Finkelstein's theorem via invariance principles .....	153
3.8	Local and tail empirical process .....	155
3.9	Modulus of continuity of $\alpha_n$ and $\beta_n$ .....	156
3.10	The Bahadur-Kiefer representation .....	159
3.11	Application to density estimation .....	162
4	Auxiliary results .....	164
4.1	Some Gaussian process theory .....	164
4.2	A functional LIL for superpositions of Gaussian processes .....	166
4.3	Karhunen-Loève expansions .....	170
4.4	The RKHS of the Wiener process and Brownian bridge .....	172
4.5	KL expansions for weighted Wiener processes and Brownian bridges .....	174
4.6	Bessel functions .....	177
	References .....	180

*Sara van de Geer*

### **Oracle Inequalities and Regularization**

1	Statistical models .....	191
1.1	Parametric models .....	192
1.2	The empirical distribution .....	193
1.3	Regularization .....	194
1.4	Bibliographical remarks .....	200
2	M-estimators .....	200
2.1	Some examples .....	200
2.2	General framework .....	202
2.3	Estimation and approximation error .....	202
2.4	Where empirical process theory comes in .....	203
2.5	Some first results, assuming ready-to-use empirical process theory .....	205

---

2.6	Balancing estimation and approximation error .....	208
2.7	Bibliographical remarks .....	208
3	The sequence space formulation .....	209
3.1	Reformulation of the regression problem .....	209
3.2	Estimating the mean of a normal vector .....	211
3.3	A collection of models .....	213
3.4	The model an oracle would select .....	214
3.5	Hard- and soft-thresholding .....	215
3.6	A probability inequality for the empirical process .....	220
3.7	Bibliographical remarks .....	221
4	Overruling the variance .....	221
4.1	Estimation and approximation error .....	222
4.2	Finite models .....	224
4.3	Nested, finite models .....	225
4.4	General penalties .....	226
4.5	Application to the “classical” penalty of Chapter 1 .....	227
4.6	Bibliographical remarks .....	229
5	The $\ell_1$ -penalty .....	229
5.1	Robust regression .....	232
5.2	Density estimation .....	235
5.3	Binary classification .....	238
5.4	The behavior on $\Xi_n$ .....	240
5.5	Bibliographical remarks .....	241
6	Tools from empirical process theory .....	242
6.1	Concentration inequalities .....	242
6.2	Symmetrization .....	243
6.3	Contraction principle .....	243
6.4	Weighted empirical processes .....	243
6.5	The case of a Lipschitz transformation of a linear space .....	244
6.6	Modulus of continuity of the empirical process .....	248
6.7	Bibliographical remarks .....	249
	References .....	250
