

# Contents

## Volume I

Preface . . . . .	v
1 The Affleck–Kennedy–Lieb–Tasaki (AKLT) model . . . . . <i>by Ian Affleck</i>	1
2 On Lieb’s “On the lowest eigenvalue of the Laplacian for the intersection of two domains” . . . . . <i>by Mark S. Ashbaugh</i>	7
3 Hartree–Fock theory, Lieb’s variational principle, and their generalizations <i>by Volker Bach</i>	19
4 Analytic bound on the excess charge for the Hartree model . . . . . <i>by Rafael D. Benguria and Trinidad Tubino</i>	67
5 Reflection positivity and infrared bounds for quantum spin systems . . . . . <i>by Jakob E. Björnberg and Daniel Ueltschi</i>	77
6 Maximal speed of propagation in open quantum systems . . . . . <i>by Sébastien Breteaux, Jérémy Faupin, Marius Lemm, and Israel Michael Sigal</i>	109
7 Lieb’s most useful contribution to density functional theory? . . . . . <i>by Kieron Burke</i>	131
8 On some convexity and monotonicity inequalities of Elliott Lieb . . . . . <i>by Eric A. Carlen</i>	143
9 Conserved quantities in general relativity – the view from null infinity . . . . . <i>by Po-Ning Chen, Mu-Tao Wang, Ye-Kai Wang, and Shing-Tung Yau</i>	211
10 Experimental tests of Lieb–Robinson bounds . . . . . <i>by Marc Cheneau</i>	225
11 Hardy–Littlewood–Sobolev and related inequalities: Stability . . . . . <i>by Jean Dolbeault and Maria J. Esteban</i>	247
12 Periodic striped states in Ising models with dipolar interactions . . . . . <i>by Davide Fermi and Alessandro Giuliani</i>	269
13 Atoms in strong magnetic fields . . . . . <i>by Søren Fournais</i>	295

14 Tunneling effect induced by a curved magnetic edge . . . . . 315  
*by Søren Fournais, Bernard Helffer, and Ayman Kachmar*

15 Rearrangement methods in the work of Elliott Lieb . . . . . 351  
*by Rupert L. Frank*

16 Quantum number towers for the Hubbard and Holstein models . . . . . 377  
*by James K. Freericks*

17 Irreversibility and the arrow of time . . . . . 401  
*by Jürg Fröhlich*

18 Ground states of atoms and molecules in non-relativistic QED . . . . . 437  
*by Marcel Griesemer*

19 Perturbation theory for a non-equilibrium stationary state of a one-  
dimensional stochastic wave equation . . . . . 451  
*by Gianluca Guadagni and Lawrence E. Thomas*

20 Entropies, majorization flow, and continuity bounds . . . . . 473  
*by Eric Patrick Hanson and Nilanjana Datta*

21 On Lieb–Robinson bounds for the double bracket flow . . . . . 515  
*by Matthew B. Hastings*

22 Lieb variation principle in density-functional theory . . . . . 527  
*by Trygve Helgaker and Andrew M. Teale*

23 Phase transitions in Dicke models . . . . . 561  
*by Klaus Hepp*

24 Applications of the Lieb–Thirring and other bounds for orthonormal  
systems in mathematical hydrodynamics . . . . . 583  
*by Alexei Ilyin, Anna Kostianko, and Sergey Zelik*

25 Review of a Simplified Approach to study the Bose gas at all densities . . . 609  
*by Ian Jauslin*

26 Knot theory and statistical mechanics . . . . . 637  
*by Louis H. Kauffman*

List of themes . . . . . 667

## Volume II

27	On the construction and exact solution of the Luttinger model by Mattis and Lieb . . . . .	1
	<i>by Edwin Langmann</i>	
28	Statistical mechanics of Coulomb systems: From electrons and nuclei to atoms and molecules . . . . .	11
	<i>by Joel L. Lebowitz</i>	
29	Relaxed energies, defect measures, and minimal currents . . . . .	19
	<i>by Fang-Hua Lin</i>	
30	Elliott Lieb’s work on stability of matter . . . . .	31
	<i>by Michael Loss</i>	
31	Comparison of Ising models under change of a priori measure . . . . .	47
	<i>by José Madrid, Barry Simon, and Daniel R. Wells</i>	
32	The Polaron problem . . . . .	73
	<i>by Chiranjib Mukherjee and Srinivasa R. S. Varadhan</i>	
33	From Lieb–Robinson bounds to automorphic equivalence . . . . .	79
	<i>by Bruno Nachtergaele</i>	
34	The ionization problem in quantum mechanics . . . . .	93
	<i>by Phan Thành Nam</i>	
35	Elliott Lieb, vertex models, and artificial spin ice . . . . .	121
	<i>by Cristiano Nisoli</i>	
36	The Lieb–Oxford lower bounds on the Coulomb energy, their importance to electron density functional theory, and a conjectured tight bound on exchange . . . . .	165
	<i>by John P. Perdew and Jianwei Sun</i>	
37	The classical Jellium and the Laughlin phase . . . . .	179
	<i>by Nicolas Rougerie</i>	
38	Compactness methods in Lieb’s work . . . . .	219
	<i>by Julien Sabin</i>	
39	The state of the Lieb–Thirring conjecture . . . . .	253
	<i>by Lukas Schimmer</i>	
40	Bose gases in the Gross–Pitaevskii limit: A survey of some rigorous results . . . . .	277
	<i>by Benjamin Schlein</i>	

41	Upper bound on the ground state energy of the two-component charged Bose gas with arbitrary masses . . . . .	307
	<i>by Andreas Schön and Jan Philip Solovej</i>	
42	Wehrl entropy, coherent states and quantum channels . . . . .	329
	<i>by Peter Schupp</i>	
43	The Lieb–Oxford bound and the optimal transport limit of DFT . . . . .	345
	<i>by Michael Seidl, Tarik Benyahia, Derk P. Kooi, and Paola Gori-Giorgi</i>	
44	The energy and electron density of heavy atoms . . . . .	361
	<i>by Heinz Siedentop</i>	
45	Recent advances on the Lieb–Liniger $\delta$ -Bose gas . . . . .	389
	<i>by Herbert Spohn</i>	
46	The Lieb–Schultz–Mattis theorem. A topological point of view . . . . .	405
	<i>by Hal Tasaki</i>	
47	Lieb’s spin-reflection-positivity method, Lieb lattice and all that . . . . .	447
	<i>by Guang-Shan Tian</i>	
48	Lieb’s permanent dominance conjecture . . . . .	501
	<i>by Ian M. Wanless</i>	
49	The $L^p$ -boundedness of wave operators for four-dimensional Schrödinger operators . . . . .	517
	<i>by Kenji Yajima</i>	
50	A direct road to entropy and the second law of thermodynamics . . . . .	565
	<i>by Jakob Yngvason</i>	
51	The Brascamp–Lieb inequality and its influence on Fourier analysis . . . . .	585
	<i>by Ruixiang Zhang</i>	
52	The Lieb–Liniger gas with cold atoms . . . . .	629
	<i>by Wilhelm Zwerger</i>	
	Publications of Elliott H. Lieb . . . . .	653
	List of contributors . . . . .	677
	List of themes . . . . .	683
