Contents

Volume I

Preface v

1 The Affleck–Kennedy–Lieb–Tasaki (AKLT) model 1
by Ian Affleck

2 On Lieb's "On the lowest eigenvalue of the Laplacian for the intersection of two domains" 7
by Mark S. Ashbaugh

3 Hartree–Fock theory, Lieb's variational principle, and their generalizations 19
by Volker Bach

4 Analytic bound on the excess charge for the Hartree model 67
by Rafael D. Benguria and Trinidad Tubino

5 Reflection positivity and infrared bounds for quantum spin systems 77
by Jakob E. Björnberg and Daniel Ueltschi

6 Maximal speed of propagation in open quantum systems 109
by Sébastien Breteaux, Jérémy Faupin, Marius Lemm, and Israel Michael Sigal

7 Lieb's most useful contribution to density functional theory? 131
by Kieron Burke

8 On some convexity and monotonicity inequalities of Elliott Lieb 143
by Eric A. Carlen

9 Conserved quantities in general relativity – the view from null infinity . . . 211
by Po-Ning Chen, Mu-Tao Wang, Ye-Kai Wang, and Shing-Tung Yau

10 Experimental tests of Lieb–Robinson bounds 225
by Marc Cheneau

11 Hardy–Littlewood–Sobolev and related inequalities: Stability 247
by Jean Dolbeault and Maria J. Esteban

12 Periodic striped states in Ising models with dipolar interactions 269
by Davide Fermi and Alessandro Giuliani

13 Atoms in strong magnetic fields 295
by Søren Fournais

14 Tunneling effect induced by a curved magnetic edge 315
by Søren Fournais, Bernard Helffer, and Ayman Kachmar

15 Rearrangement methods in the work of Elliott Lieb 351
by Rupert L. Frank

16 Quantum number towers for the Hubbard and Holstein models 377
by James K. Freericks

17 Irreversibility and the arrow of time 401
by Jürg Fröhlich

18 Ground states of atoms and molecules in non-relativistic QED 437
by Marcel Griesemer

19 Perturbation theory for a non-equilibrium stationary state of a one-dimensional stochastic wave equation 451
by Gianluca Guadagni and Lawrence E. Thomas

20 Entropies, majorization flow, and continuity bounds 473
by Eric Patrick Hanson and Nilanjana Datta

21 On Lieb–Robinson bounds for the double bracket flow 515
by Matthew B. Hastings

22 Lieb variation principle in density-functional theory 527
by Trygve Helgaker and Andrew M. Teale

23 Phase transitions in Dicke models 561
by Klaus Hepp

24 Applications of the Lieb–Thirring and other bounds for orthonormal systems in mathematical hydrodynamics 583
by Alexei Ilyin, Anna Kostianko, and Sergey Zelik

25 Review of a Simplified Approach to study the Bose gas at all densities . . . 609
by Ian Jauslin

26 Knot theory and statistical mechanics 637
by Louis H. Kauffman

List of themes 667

Volume II

27 On the construction and exact solution of the Luttinger model by Mattis and Lieb 1
by Edwin Langmann

28 Statistical mechanics of Coulomb systems: From electrons and nuclei to atoms and molecules 11
by Joel L. Lebowitz

29 Relaxed energies, defect measures, and minimal currents 19
by Fang-Hua Lin

30 Elliott Lieb's work on stability of matter 31
by Michael Loss

31 Comparison of Ising models under change of a priori measure 47
by José Madrid, Barry Simon, and Daniel R. Wells

32 The Polaron problem 73
by Chiranjib Mukherjee and Srinivasa R. S. Varadhan

33 From Lieb–Robinson bounds to automorphic equivalence 79
by Bruno Nachtergaele

34 The ionization problem in quantum mechanics 93
by Phan Thành Nam

35 Elliott Lieb, vertex models, and artificial spin ice 121
by Cristiano Nisoli

36 The Lieb–Oxford lower bounds on the Coulomb energy, their importance to electron density functional theory, and a conjectured tight bound on exchange 165
by John P. Perdew and Jianwei Sun

37 The classical Jellium and the Laughlin phase 179
by Nicolas Rougerie

38 Compactness methods in Lieb's work 219
by Julien Sabin

39 The state of the Lieb–Thirring conjecture 253
by Lukas Schimmer

40 Bose gases in the Gross–Pitaevskii limit: A survey of some rigorous results 277
by Benjamin Schlein

41 Upper bound on the ground state energy of the two-component charged Bose gas with arbitrary masses 307
by Andreas Schön and Jan Philip Solovej

42 Wehrl entropy, coherent states and quantum channels 329
by Peter Schupp

43 The Lieb–Oxford bound and the optimal transport limit of DFT 345
by Michael Seidl, Tarik Benyahia, Derk P. Kooi, and Paola Gori-Giorgi

44 The energy and electron density of heavy atoms 361
by Heinz Siedentop

45 Recent advances on the Lieb–Liniger δ-Bose gas 389
by Herbert Spohn

46 The Lieb–Schultz–Mattis theorem. A topological point of view 405
by Hal Tasaki

47 Lieb's spin-reflection-positivity method, Lieb lattice and all that 447
by Guang-Shan Tian

48 Lieb's permanental dominance conjecture 501
by Ian M. Wanless

49 The L^p-boundedness of wave operators for four-dimensional Schrödinger operators 517
by Kenji Yajima

50 A direct road to entropy and the second law of thermodynamics 565
by Jakob Yngvason

51 The Brascamp–Lieb inequality and its influence on Fourier analysis 585
by Ruixiang Zhang

52 The Lieb–Liniger gas with cold atoms 629
by Wilhelm Zwerger

Publications of Elliott H. Lieb 653

List of contributors 677

List of themes 683
