

About the authors

Alain Bretto is a professor of computer science at the University of Caen in Normandy, France. He has been visiting professor in the USA and in Italy. His research is devoted to graph theory and hypergraphs, particularly their algebraic and topological aspects. A renowned expert in these areas, he is also interested in their mathematical applications: image analysis, finance, and information technology.

Alain Faisant was an associate professor of mathematics at the University of Saint-Étienne, France, where he spent the major part of his career, and still pursues research as professor emeritus. His work concentrated mainly on number theory, and he is the author of a popular textbook on the subject: *L'équation diophantienne du second degré* (Second Degree Diophantine Equations), Hermann, 1991.

François Hennecart is a professor of mathematics at the University of Saint-Étienne. His research is devoted to number theory, especially additive and combinatorial problems, two areas in which graph theory plays a particularly important role.
