# Acknowledgments

The authors are very grateful to:

- the audiences of our talks and lectures on this topic at Aarhus, Augsburg, Berlin, Linz, Nakhon Si Thammarat, Paderborn and Würzburg for their interest and fruitful discussions;

- Athanasios Sourmelidis and Pascal Stumpf for their technical support;

- the *European Mathematical Society* and, in particular, Apostolos Damialis for his kind encouragement, Nicole Bloye for her great editorial work, as well as four anonymous referees for their valuable remarks and corrections (in particular, with respect to commutative divisibility and our euclidean proof of an infinitude of prime quaternions);

- the ETH Library, in particular, Evelyn Boesch and Monica Bussmann for their unlimited support; and last, but not least,

- the *Mathematisches Forschungsinstitut Oberwolfach* and its friendly staff for providing the opportunity of a wonderful *research in pairs* in September 2019. This stay in the inspiring atmosphere of the Black Forest made it possible to finish this book project. It was a nice surprise to learn from a commemorative plaque in the library how the partner (Todd) of a protagonist of our story (Taussky) was involved in the rescue of this extraordinary place of mathematical research after World War II (see also page 252). During our stay we had interesting and stimulating discussions with other mathematicians about climate change. For this reason we came to the conclusion that we may show our appreciation of Greta Thunberg's work by dedicating this book to her.
