Preface v

8ECM committees xiii

List of sponsors xv

Plenary lectures

Regularity of stable solutions to reaction-diffusion elliptic equations 1
by Xavier Cabré

Minimal surfaces in Euclidean spaces by way of complex analysis 9
by Franc Forstnerič

Bernoulli random matrices 45
by Alice Guionnet

An introduction to the mathematics of deep learning 73
by Gitta Kutyniok

Geometric valuation theory 93
by Monika Ludwig

Metric measure spaces and synthetic Ricci bounds: Fundamental concepts and recent developments 125
by Karl-Theodor Sturm

Torsion in algebraic groups and problems which arise 161
by Umberto Zannier

Invited lectures

Positive harmonic functions on the Heisenberg group I 181
by Yves Benoist

Kähler–Einstein metrics and Archimedean zeta functions 199
by Robert J. Berman

Variational regularization in inverse problems and machine learning 253
by Martin Burger

Some minimization problems for mean field models with competing forces . . 277
by Rupert L. Frank

Laplacians on infinite graphs: Discrete vs. continuous 295
by Aleksey Kostenko and Noema Nicolussi

Uniqueness results for solutions of continuous and discrete PDE 325
by Eugenia Malinnikova

Some recent developments on the geometry of random spherical eigenfunctions 337
by Domenico Marinucci

Looking at Euler flows through a contact mirror: Universality and undecidability 367
by Robert Cardona, Eva Miranda, and Daniel Peralta-Salas

Lefschetz fibrations, open books, and symplectic fillings of contact 3-manifolds 395
by Burak Ozbagci

Finite groups of birational transformations 413
by Yuri Prokhorov

Propositional proof complexity 439
by Alexander A. Razborov

Covering and growth for group subsets and representations 465
by Aner Shalev

HMS symmetries and hypergeometric systems 489
by Špela Špenko

AAA-least squares rational approximation and solution of Laplace problems . 511
by Stefano Costa and Lloyd N. Trefethen

EMS prize lectures

Smooth compactifications in derived non-commutative geometry 535
by Alexander I. Efimov

Global properties of some weight 3 variations of Hodge structure 553
by Simion Filip

On primes, almost primes, and the Möbius function in short intervals 569
by Kaisa Matomäki

Bogoliubov excitation spectrum of Bose gases 585
by Phan Thành Nam

From branching singularities in minimal surfaces to non-smoothness points in ice-water interfaces 607
by Joaquim Serra

Elliptic curves and modularity 643
by Jack A. Thorne

Public lectures

From art and circuit design to geometry and combinatorics 663
by Bojan Mohar

European mathematics: A history in stamps 677
by Robin Wilson

Minisymposia keynote lectures

Detecting arrays for effects of single factors 693
by Charles J. Colbourn and Violet R. Syrotiuk

Digital collections of examples in mathematical sciences 719
by James H. Davenport

Closed G_2-structures on compact quotients of Lie groups 733
by Anna Fino and Alberto Raffero

Computational/algorithmic thinking in school mathematics 749
by Djordje M. Kadijevich

Graph and hypergraph colouring via nibble methods: A survey 771
by Dong Yeap Kang, Tom Kelly, Daniela Kühn, Abhishek Methuku, and Deryk Osthus

From matrix pivots to graphs in surfaces: Exploring combinatorics through partial duals 825
by Iain Moffatt

Convex bodies all whose sections (projections) are equal 857
by Luis Montejano

On a class of nonlocal problems with fractional gradient constraint 885
by Assis Azevedo, José-Francisco Rodrigues, and Lisa Santos

The topology of dissipative systems 907
by Héctor Barge and José M. R. Sanjurjo

Onset of fracture in random heterogeneous particle chains 927
by Laura Lauerbach, Stefan Neukamm, Mathias Schäffner, and Anja Schlömerkemper

Siu's lemma: Generalizations and applications 947
by Xiangyu Zhou and Langfeng Zhu
