Preface	vii
Notation and conventions	xv
1 Metric spaces and large scale geometry	1
1.1 Metric spaces	1
1.2 Groups as metric spaces	6
1.3 Quasi-isometries	9
1.4 Coarse equivalences	15
1.5 Hyperbolic spaces	19
Exercises	24
Notes and remarks	25
2 Asymptotic dimension and decomposition complexity	27
2.1 Topological dimension	27
2.2 Asymptotic dimension	28
2.3 Dimension of hyperbolic groups	31
2.4 Upper bounds for asymptotic dimension	33
2.5 Asymptotic dimension of solvable groups	37
2.6 Groups with infinite asymptotic dimension	39
2.7 Decomposition complexity	40
2.8 Invariance and permanence	43
2.9 Groups with finite decomposition complexity	46
Exercises	48
Notes and remarks	48
3 Amenability	51
3.1 Følner conditions	51
3.2 The Hulanicki–Reiter condition	57
3.3 Invariant means	60
Exercises	62
Notes and remarks	63
4 Property A	65
4.1 Definition and basic properties	65
4.2 The Higson–Roe condition	68

4.3	Finite asymptotic dimension implies property A	72
4.4	Property A and residually finite groups	76
4.5	Locally finite examples	80
	Exercises	84
	Notes and remarks	84
5	Coarse embeddings	87
5.1	Coarse embeddings	87
5.2	Embeddability into Hilbert spaces	88
5.3	Examples of embeddable spaces without property A	93
5.4	Convexity and reflexivity	95
5.5	Coarse embeddings and finite subsets	100
5.6	Expanders	102
5.7	A geometric characterization of non-embeddability	105
5.8	Compression of coarse embeddings	112
5.9	Compression $> \frac{1}{2}$ implies property A	114
	Exercises	120
	Notes and remarks	121
6	Group actions on Banach spaces	123
6.1	Affine isometric actions	123
6.2	Metrically proper actions and a-T-menability	125
6.3	Actions on ℓ_p -spaces and reflexive Banach spaces	129
6.4	Kazhdan's property (T)	133
6.5	Fixed points and Kazhdan's property (T)	134
6.6	Construction of expanders	136
6.7	Property (T) and spectral conditions	138
	Exercises	144
	Notes and remarks	145
7	Coarse homology	147
7.1	Coarse locally finite homology	147
7.2	Uniformly finite homology	148
7.3	Eilenberg swindles and Ponzi schemes	153
7.4	Aperiodic tiles and non-amenable spaces	158
7.5	Coarsening homology theories	164
7.6	The coarsening homomorphism	166
	Exercises	168
	Notes and remarks	169

8 Survey of applications	171
8.1 Topological rigidity	171
8.2 Geometric rigidity	172
8.3 Index theory	174
References	179
Index	195
