Preface	vii
Introduction	1
1 Euclidean apartments	9
1.1 Groups generated by reflections and apartments	9
1.2 Linear reflection groups	15
1.3 General reflection groups	26
1.4 Discrete reflection groups	35
1.5 Facets and general apartments	52
1.6 Appendix: Root systems	62
2 Euclidean buildings	77
2.1 Definitions and general properties	77
2.2 Discrete Euclidean buildings	95
2.3 Metric properties of Euclidean buildings	107
2.4 Types, products and completion	125
3 Properties at infinity	139
3.1 Sector-friendly systems of apartments	139
3.2 Spherical building at infinity	155
3.3 Chimney-friendly buildings	176
3.4 Polyhedral compactification	193
4 Groups of automorphisms	209
4.1 Fixed point theorems	209
4.2 Strongly transitive actions	215
4.3 Moufang buildings	228
4.4 Affine Moufang buildings	242
5 Buildings associated to groups	255
5.1 Parabolic groups associated to RGD systems	255
5.2 Parahoric groups associated to valued RGD systems	270
5.3 Decompositions	286
5.4 Construction of buildings with a strongly transitive action	295
5.5 Morphisms	309

6	Examples	327
6.1	Vectorial buildings associated to GL_n	327
6.2	Affine buildings associated to GL_n	343
6.3	Vectorial buildings associated to isometry groups	375
6.4	Affine buildings associated to isometry groups	413
6.5	Buildings as ultralimits	437
7	Applications	453
7.1	Retractions of apartments, galleries or line segments	453
7.2	LS paths and Hecke paths	475
7.3	Hecke algebras	493
7.4	Iwahori–Hecke algebras	500
7.5	Spherical Hecke algebras	528
7.6	Discreteness	551
A	Notations	569
A.1	Use of letters	569
A.2	Mathematical conventions	570
	References	573
	Notation index	585
	Subject index	589
