Foreword	v
Preface to the Second Edition	vii
Preface to the First Edition	xi
Structure of Compact Groups and Pro-Lie Groups: Our Selection	1
Compact Abelian Groups	3
Compact Groups	6
Lie Theory	11
Abelian Pro-Lie Groups	13
Pro-Lie Groups	14
1 Lie Groups and the Lie Theory of Topological Groups	17
The General Definition of a Lie Group	17
The Exponential Function of Topological Groups	20
The Lie Algebra of a Topological Group	25
The Category of Topological Groups with Lie Algebras	30
The Lie Algebra Functor Has a Left Adjoint Functor	38
Sophus Lie's Third Fundamental Theorem	42
The Adjoint Representation of a Topological Group with a Lie Algebra	42
Postscript	45
2 Pro-Lie Groups	47
Projective Limits of Lie Groups	47
The Lie Algebras of Projective Limits of Lie Groups	50
Pro-Lie Algebras	50
Weakly Complete Topological Vector Spaces and Lie Algebras	55
Pro-Lie Groups	61
Some Examples	80
An Overview of the Definitions of a Pro-Lie Group	80
Postscript	84
3 Quotients of Pro-Lie Groups	89
Quotient Objects in Categories	90
Quotient Groups of Pro-Lie Groups	91

	The One-Parameter Subgroup Lifting Lemma	94
	Sufficient Conditions for Quotients to be Complete	105
	Quotient Maps between Pro-Lie Groups	120
	Postscript	123
4	Abelian Pro-Lie Groups	125
	Examples of Abelian Pro-Lie Groups	125
	Weil’s Lemma	129
	Vector Group Splitting Theorems	133
	Compactly Generated Abelian Pro-Lie Groups	147
	Weakly Complete Topological Vector Spaces Revisited	150
	The Duality Theory of Abelian Pro-Lie Groups	153
	The Toral Homomorphic Images of an Abelian Pro-Lie Group	157
	The Exponential Function of Compact Abelian Groups and Quotient Morphisms	161
	Postscript	172
5	Lie’s Third Fundamental Theorem	175
	Lie’s Third Fundamental Theorem for Pro-Lie Groups	175
	Semidirect Products	191
	Postscript	194
6	Profinite-Dimensional Modules and Lie Algebras	197
	Modules over a Lie Algebra	197
	Duality of Modules	200
	Semisimple and Reductive Modules	206
	Reductive Pro-Lie Algebras	211
	Transfinitely Solvable Lie Algebras	214
	The Radical and Levi–Mal’cev: Existence	221
	Transfinitely Nilpotent Lie Algebras	227
	The Nilpotent Radicals	231
	Special Endomorphisms of Pro-Lie Algebras	237
	Levi–Mal’cev: Uniqueness	241
	Direct and Semidirect Sums Revisited	245
	Cartan Subalgebras of Pro-Lie Algebras	247
	Theorem of Ado	264
	The Automorphism Group of Semisimple Pro-Lie Algebras	266
	Postscript	282

7	The Structure of Simply Connected Pro-Lie Groups	285
	The Adjoint Action	285
	Simply Connected Pronilpotent Pro-Lie Groups	286
	The Topological Splitting Technique	290
	Simple Connectivity	293
	Universal Morphism versus Universal Covering Morphism	303
	Postscript	305
8	Analytic Subgroups and the Lie Theory of Pro-Lie Groups	307
	The Exponential Function on the Inner Derivation Algebra	307
	Analytic Subgroups	311
	Automorphisms and Invariant Analytic Subgroups	321
	Centralizers	322
	Normalizers	325
	Subalgebras and Subgroups	327
	The Center	329
	The Commutator Subgroup	329
	Finite-Dimensional Connected Pro-Lie Groups	338
	Compact Central Subgroups	356
	Divisibility of Groups and Connected Pro-Lie Groups	359
	The Open Mapping Theorem	365
	Completing Proto-Lie Groups	369
	Unitary Representations	371
	Postscript	372
9	The Global Structure of Connected Pro-Lie Groups	375
	Solvability of Pro-Lie Groups	376
	The Radical	388
	Semisimple and Reductive Groups	392
	Nilpotency of Pro-Lie Groups	402
	The Nilradical and the Coreductive Radical	406
	The Structure of Reductive Pro-Lie Groups	412
	Postscript	419
10	Splitting Theorems for Pro-Lie Groups	423
	Splitting Reductive Groups Semidirectly	424
	Vector Group Splitting in Noncommutative Groups	436
	The Structure of Pronilpotent and Prosolvable Groups	442
	Conjugacy Theorems	451
	Postscript	454

11 Procompact Subalgebras of Pro-Lie Algebras and Compact Subgroups of Pro-Lie Groups	457
Procompact Modules and Lie Algebras	457
Procompact Lie Algebras and Compactly Embedded Lie Subalgebras of Pro-Lie Algebras	464
Maximal Compactly Embedded Subalgebras of Pro-Lie Algebras	469
Conjugacy of Maximal Compactly Embedded Subalgebras	472
Compact Connected Groups	483
Compact Subgroups	485
Potentially Compact Pro-Lie Groups	488
The Conjugacy of Maximal Compact Connected Subgroups	491
The Analytic Subgroups Having a Full Lie Algebra	500
Maximal Compact Subgroups of Connected Pro-Lie Groups	512
An Alternative Open Mapping Theorem	517
On the Center of a Connected Pro-Lie Group	519
Postscript	522
12 The Structure of Almost Connected Pro-Lie Groups	527
The Automorphism Groups of Semisimple Pro-Lie Groups	527
Topological Groups with Pro-Lie Identity Component	534
Almost Connected Pro-Lie Groups	538
Maximal Compact Subgroups of Almost Connected Pro-Lie Groups	540
The Conjugacy of Maximal Compact Subgroups in Almost Connected Pro-Lie Groups	543
The Structure of Almost Connected Pro-Lie Groups	544
Postscript	544
13 Almost Connected Pro-Lie Groups and their Topology	547
Almost Connected Pro-Lie Groups and their Topology	547
Postscript	556
14 Iwasawa's Local Splitting Theorem	557
Locally Splitting Lie Group Quotients of Pro-Lie Groups	557
The Lie Algebra Theory of the Local Splitting	562
Splitting on the Group Level	571
Some Comments on Connectedness	576
Postscript	577
15 Catalog of Examples	579
Classification of the Examples in the Catalog	579
Abelian Pro-Lie Groups	580

A Simple Construction	588
Pronilpotent Pro-Lie Groups	591
Prosolvable Pro-Lie Groups	595
Semisimple and Reductive Pro-Lie Groups	602
Mixed Groups	609
Examples Concerning the Definition of Lie and Pro-Lie Groups	611
Analytic Subgroups of Pro-Lie Groups	615
Examples Concerning Simple Connectivity	616
Example Concerning \mathfrak{g} -Module Theory	617
Postscript	617
Panoramic Overview of this Book	619
Part 1. The Base Theory of Pro-Lie Groups	625
Part 2. The Algebra of Pro-Lie Algebras	639
Part 3. The Fine Lie Theory of Pro-Lie Groups	648
Part 4. Global Structure Theory of Connected Pro-Lie Groups	656
Part 5. The Role of Compactness on the Pro-Lie Algebra Level	667
Part 6. The Role of Compact Subgroups of Pro-Lie Groups	675
Part 7. Local Splitting According to Iwasawa	686
A1 Limits of Topological Groups	689
Limits	690
The External Approach to Projective Limits	704
Projective Limits and Local Compactness	709
The Fundamental Theorem on Projective Limits	716
The Internal Approach to Projective Limits	719
Projective Limits and Completeness	722
The Closed Subgroup Theorem	725
The Role of Local Compactness	729
The Role of Closed Full Subcategories in Complete Categories	731
Postscript	734
A2 Weakly Complete Topological Vector Spaces	737
Character Groups of Topological Vector Spaces	737
Weakly Complete Topological Vector Spaces	745
Duality at Work for the Structure Theory of Weakly Complete Topological Vector Spaces	751
Topological Properties of Weakly Complete Topological Vector Spaces	755
Summability in Weakly Complete Topological Vector Spaces	758
Continuous Symplectic Maps on Weakly Complete Topological Vector Spaces	758

Tensor Products	761
Weakly Complete Unital Algebras	762
The Exponential Function	766
Weakly Complete Symmetric Hopf Algebras	768
The Significance of Grouplike Elements	770
The Significance of Primitive Elements	774
Postscript	782
A3 The Campbell–Hausdorff Formalism	785
Postscript	789
A4 Various Pieces of Information on Semisimple Lie Algebras	791
Brackets in Semisimple Lie Algebras	791
Brackets in Compact Lie Algebras	792
Maximal Compactly Embedded Subalgebras	794
Postscript	795
References	797
Index	809
