Contents

Foreword 1

1 Preliminaries and definitions 3
1.1 The Wigner distribution 3
1.2 Weyl quantization, composition formulas, positive quantizations 5
1.3 Examples 36
1.4 Integrals of the Wigner distribution on subsets of the phase space . . . 39

2 Quantization of radial functions and Mehler's formula 41
2.1 Basic formulas in one dimension 41
2.2 Higher-dimensional questions 42

3 Conics with eccentricity smaller than 1 45
3.1 Indicatrix of a disc 45
3.2 Indicatrix of a Euclidean ball 53
3.3 Ellipsoids in the phase space 58
3.4 A conjecture on integrals of products of Laguerre polynomials 71

4 Parabolas 77
4.1 Preliminary remarks 77
4.2 Calculation of the kernel 79
4.3 The main result 81
4.4 Paraboloids, a conjecture 82

5 Conics with eccentricity greater than 1 87
5.1 The quarter-plane, a counterexample to Flandrin's conjecture 87
5.2 Hyperbolic regions 97
5.3 Comments and further results 111
5.4 Numerics 115

6 Unboundedness is Baire generic 121
6.1 Preliminaries 121
6.2 Modulation spaces 124
6.3 Most pulses give rise to a non-integrable Wigner distribution 131
6.4 Consequences on integrals of the Wigner distribution 133

7 Convex polygons of the plane . . . 137
7.1 Convex cones . . . 137
7.2 Triangles . . . 139
7.3 Convex polygons . . . 143
7.4 Symbols supported in a half-space . . . 146

8 Open questions and conjectures . . . 149
8.1 Anisotropic ellipsoids and paraboloids . . . 149
8.2 Balls for the ℓ^p norm . . . 150
8.3 On generic pulses in $L^2(\mathbb{R}^n)$ . . . 150
8.4 On convex bodies . . . 150

A Appendix . . . 153
A.1 Fourier transform, Weyl quantization, harmonic oscillator . . . 153
A.2 Further properties of the metaplectic group . . . 162
A.3 Mehler's formula . . . 174
A.4 Laguerre polynomials . . . 176
A.5 Singular integrals . . . 179
A.6 On some auxiliary functions . . . 180
A.7 Airy function . . . 193
A.8 Miscellaneous formulas . . . 205

References . . . 211

Index . . . 215
