Preface	vii
1 Introduction	1
1.1 Brief history of random matrix theory	1
1.2 What are random matrices and what do we want to know about them?	2
1.3 Wigner's semicircle law	4
1.4 Universality	5
1.5 Concentration phenomena	5
1.6 From histograms to moments	6
1.7 Choice of scaling	7
1.8 The semicircle and its moments	8
1.9 Types of convergence	8
1.10 Exercises	10
2 Gaussian random matrices: Wick formula and combinatorial proof of Wigner's semicircle law	13
2.1 Gaussian random variables and Wick formula	13
2.2 Gaussian random matrices and genus expansion	16
2.3 Non-crossing pairings	20
2.4 Semicircle law for GUE	22
3 Wigner matrices: Combinatorial proof of Wigner's semicircle law	25
3.1 Wigner matrices	25
3.2 Combinatorial description of moments of Wigner matrices	25
3.3 Semicircle law for Wigner matrices	28
3.4 Exercises	29
4 Analytic tools: Stieltjes transform and convergence of measures	31
4.1 Stieltjes transform	32
4.2 Convergence of probability measures	34
4.3 Probability measures determined by moments	37
4.4 Description of weak convergence via the Stieltjes transform	38
4.5 Exercises	39
5 Analytic proof of Wigner's semicircle law for Gaussian random matrices	41
5.1 GOE random matrices	41

5.2	Stein's identity for independent Gaussian variables	42
5.3	Semicircle law for GOE	44
5.4	Exercises	46
6	Concentration phenomena and stronger forms of convergence for the semicircle law	49
6.1	Forms of convergence	49
6.2	Markov's and Chebyshev's inequality	50
6.3	Poincaré inequality	51
6.4	Concentration for $\text{tr}(R_A(z))$ via Poincaré inequality	55
6.5	Logarithmic Sobolev inequalities	57
6.6	Exercises	58
7	Analytic description of the eigenvalue distribution of Gaussian random matrices	61
7.1	Joint eigenvalue distribution for GOE and GUE	61
7.2	Rewriting the Vandermonde	65
7.3	Rewriting the GUE density in terms of Hermite kernels	66
7.4	Exercises	71
8	Determinantal processes and non-crossing paths: Karlin–McGregor and Gessel–Viennot	73
8.1	Stochastic version à la Karlin–McGregor	73
8.2	Combinatorial version à la Gessel–Viennot	75
8.3	Dyson Brownian motion and non-intersecting paths	77
8.4	Exercises	78
9	Statistics of the largest eigenvalue and Tracy–Widom distribution	79
9.1	Some heuristics on single eigenvalues	79
9.2	Tracy–Widom distribution	80
9.3	Convergence of the largest eigenvalue to 2	81
9.4	Estimate for fluctuations	84
9.5	Non-rigorous derivation of the Tracy–Widom distribution	84
9.6	Proof of the Harer–Zagier recursion	88
9.7	Exercises	92
10	Statistics of the longest increasing subsequence	95
10.1	Complete disorder is impossible	95
10.2	Tracy–Widom for the asymptotic distribution of L_n	96
10.3	Very rough sketch of the proof of the Baik–Deift–Johansson theorem	97

11 The circular law 101

 11.1 Circular law for the Ginibre ensemble 101

 11.2 General circular law 104

 11.3 Exercises 106

12 Several independent GUEs and asymptotic freeness 107

 12.1 The problem of non-commutativity 107

 12.2 Joint moments of independent GUEs 108

 12.3 The concept of free independence 109
