Preface of first edition	v
Preface of second edition	vii
Part I Analysis of differential-algebraic equations	1
1 Introduction	3
1.1 Solvability concepts	5
1.2 Index concepts	6
1.3 Applications	8
1.4 How to use this book in teaching	11
2 Linear differential-algebraic equations with constant coefficients	13
2.1 Canonical forms	13
2.2 The Drazin inverse	22
2.3 Explicit representation of solutions	27
2.4 Generalized solutions	32
2.5 Control problems	48
2.6 Optimal control	57
2.7 Stability and stabilization	67
2.8 Additional symmetries	74
Bibliographical remarks	83
3 Linear differential-algebraic equations with variable coefficients	89
3.1 Canonical forms	89
3.2 Local and global invariants	113
3.3 Regularity and the differentiation index	129
3.4 Differential-algebraic operators and generalized inverses	150
3.5 Generalized solutions	168
3.6 Control problems	174
3.7 Optimal control	183
3.8 Formal adjoints and formal necessary conditions	201
3.9 Stability	219
3.10 Additional symmetries	222

Bibliographical remarks	230
4 Non-linear differential-algebraic equations	235
4.1 Existence and uniqueness of solutions	235
4.2 Structured problems	253
4.3 Over- and underdetermined problems	268
4.4 Differential equations on manifolds	275
4.5 Control problems	290
4.6 Optimal control	296
4.7 Stability	298
Bibliographical remarks	305
Part II Numerical solution of differential-algebraic equations	311
5 Numerical methods for strangeness-free problems	313
5.1 Preparations	314
5.2 One-step methods	320
5.3 Multi-step methods	350
5.4 Stability of discretization methods	365
Bibliographical remarks	379
6 Numerical methods for index reduction	383
6.1 Index reduction for linear problems	384
6.2 Index reduction for non-linear problems	388
6.3 Index reduction via feedback control	394
6.4 Index reduction by minimal extension	396
6.5 Stabilization techniques	404
Bibliographical remarks	407
7 Boundary value problems	411
7.1 Existence and uniqueness of solutions	412
7.2 Multiple shooting	417
7.3 Collocation	427
7.4 Boundary value problems in optimal control	461
Bibliographical remarks	465
8 Further selected topics	471
8.1 Overdetermined consistent systems	471
8.2 Root finding	473

8.3 Numerical pathfollowing	475
8.4 Hybrid systems	480
8.5 Dissipative Hamiltonian systems	485
Bibliographical remarks	494
Final remarks	499
References	501
Index	521
