<b>Preface</b> .....	vii
<b>Introduction</b> .....	ix
<b>1 Definition and basic properties</b> .....	1
1.1 Projective spaces .....	1
1.2 Definition, terminology and examples .....	2
1.3 Singular subspaces .....	4
1.4 Opposite singular subspaces .....	6
1.5 Polar frames and apartments .....	10
1.6 Quotient spaces and polar subspaces .....	10
1.7 Thick and top-thin, order .....	16
1.8 The projective planes of a thick polar space of rank 3 .....	18
<b>2 Shult spaces and the one-or-all axiom</b> .....	21
2.1 Axioms for points and lines .....	21
2.2 The axioms of Buekenhout and Shult .....	22
2.3 Buekenhout–Shult spaces are polar spaces .....	24
2.4 Exercises for Chapters 1 and 2 .....	28
<b>3 Generalised polarities and reflexive forms</b> .....	33
3.1 Embeddable polar spaces .....	33
3.2 Polar spaces of regular generalised polarities .....	34
3.3 Generalised polarities and reflexive $(\sigma, \text{id})$ -linear forms .....	40
3.4 Discussion and standard forms .....	45
3.5 Special cases .....	48
3.6 Symplectic polar spaces .....	52
<b>4 Polar spaces from pseudo-quadratic forms</b> .....	57
4.1 Motivation and an example .....	57
4.2 Pseudoquadratic forms .....	58
4.3 The polar space attached to $\mathfrak{q}$ .....	59
4.4 Reduction to anisotropic forms, standard forms for $\mathfrak{q}$ .....	62
4.5 Special cases .....	64
4.6 A pseudo-quadratic polar space that is not a Hermitian variety .....	70

<b>5</b>	<b>Non-embeddable polar spaces</b>	75
5.1	Features about rank 3 polar spaces	75
5.2	Non-embeddable top-thin polar spaces	75
5.3	Non-embeddable thick polar spaces	76
5.4	Exercises for Chapters 3, 4 and 5	83
<b>6</b>	<b>Diagrams and oriflamme geometries</b>	87
6.1	Coxeter diagrams, Dynkin diagrams	87
6.2	Geometries of type M	88
6.3	The diagram of a thick polar space	89
6.4	Oriflamme geometries, polar spaces of type $D_n$	92
6.5	Classification of top-thin polar spaces	95
6.6	The Neumaier or Alt(7) geometry	99
<b>7</b>	<b>Central and axial collineations</b>	101
7.1	Automorphism group of a polar space	101
7.2	Central collineations	102
7.3	Axial collineations	105
<b>8</b>	<b>The geometric principle of triality</b>	111
8.1	The exceptional symmetry of the diagram of type $D_4$	111
8.2	Geometric approach to the triality principle	111
8.3	Algebraic approach to the triality principle	113
8.4	Trialities of order 3	116
8.5	Generalised hexagons ... what else?	119
8.6	Exercises for Chapters 6, 7 and 8	120
<b>9</b>	<b>Parapolar spaces</b>	125
9.1	Exceptional geometries and Grassmannians	125
9.2	The axioms of a parapolar space and basic properties	125
9.3	Geometries from diagrams	128
9.4	Examples of parapolar spaces	129
9.5	An axiom system for parapolar spaces of type $E_{6,1}$	138
9.6	Singular subspaces of parapolar spaces	139
9.7	Exercises for Chapter 9	141
<b>A</b>	<b>Cayley–Dickson division algebras and Moufang planes</b>	145
A.1	Definition and first properties of composition algebras	145
A.2	Division algebras and split algebras	150
A.3	The Cayley–Dickson process	151
A.4	The Cayley–Dickson algebras	154

A.5 Classification of composition algebras . . . . .	158
A.6 Cayley planes . . . . .	158
<b>References</b> . . . . .	161
<b>Index</b> . . . . .	163
