Preface	vii
1 Overview	1
2 Motivation for Tractability Studies	3
2.1 Notes and Remarks	13
3 Twelve Examples	14
3.1 Tractability in the Worst Case Setting	14
3.1.1 Example 1: Integration of Lipschitz Functions	14
3.1.2 Example 2: Integration of Trigonometric Polynomials	16
3.1.3 Example 3: Integration of Smooth Periodic Functions	19
3.1.4 Example 4: Approximation of C^∞ Functions	23
3.1.5 Example 5: Discrepancy	34
3.1.6 Example 6: Diagonal Problems for Weighted Spaces	40
3.2 Tractability in Other Settings	48
3.2.1 Average Case Setting	50
3.2.2 Example 7: Isotropic Wiener Measure	50
3.2.3 Example 8: Folded Wiener Sheet Measure	58
3.2.4 Probabilistic Setting	63
3.2.5 Example 9: Absolute and Normalized Errors	63
3.2.6 Example 10: Relative Error	65
3.2.7 Randomized Setting	67
3.2.8 Example 11: Monte Carlo Algorithm	68
3.2.9 Example 12: Class Λ^{all}	73
3.3 Open Problems	75
3.4 Notes and Remarks	85
4 Basic Concepts and Survey of IBC Results	89
4.1 Complexity in the Worst Case Setting	89
4.1.1 Types of Information	92
4.1.2 Algorithms and Their Cost	97
4.1.3 Why Do We Use the Real Number Model?	99
4.1.4 Errors and Complexity	105
4.1.5 Information Complexity and Total Complexity	107
4.2 Basic Results for Linear Problems in the Worst Case Setting	108
4.2.1 On the Power of Adaption	109
4.2.2 Linear and Nonlinear Algorithms for Linear Problems	115
4.2.3 Linear Problems on Hilbert Spaces for Λ^{all}	118
4.2.4 Sobolev Embeddings	119

4.3	Some Results for Different Settings	127
4.3.1	Average Case Setting	127
4.3.2	Probabilistic Setting	137
4.3.3	Randomized Algorithms	140
4.4	Multivariate Problems and Tractability	148
4.4.1	Polynomial Tractability	149
4.4.2	Weak Tractability	150
4.4.3	Generalized Tractability	151
4.5	Notes and Remarks	152
5	Worst Case Setting	155
5.1	Linear Problems Defined over Hilbert Spaces	156
5.2	Linear Tensor Product Problems	173
5.3	Linear Weighted Tensor Product Problems	188
5.3.1	Weighted Hilbert Spaces	189
5.3.2	Types of Weights	194
5.3.3	Weighted Operators	199
5.3.4	Tractability of Weighted Problems	200
5.4	Other Ways of Obtaining Linear Weighted Problems	220
5.4.1	Weighted Sobolev Space of Smooth Functions	221
5.4.2	General Linear Weighted Problems	229
5.5	Notes and Remarks	238
6	Average Case Setting	241
6.1	Linear Problems	242
6.2	Linear Tensor Product Problems	255
6.3	Linear Weighted Tensor Product Problems	265
6.4	Notes and Remarks	282
7	Randomized Setting	284
7.1	Tractability of Linear Problems for Λ^{all}	284
8	Generalized Tractability	286
8.1	Motivation of Generalized Tractability	289
8.2	Linear Tensor Product Problems	295
8.3	Restricted Tractability Domain	296
8.3.1	Restricted Tractability in ε	296
8.3.2	Restricted Tractability in d	299
8.3.3	Restricted Tractability with $d^* \geq 1$ and $\varepsilon_0 < 1$	314
8.4	Unrestricted Tractability Domain	319
8.4.1	Finitely Many Eigenvalues	320
8.4.2	Exponential Decay of Eigenvalues	327
8.4.3	Polynomial Decay of Eigenvalues	331
8.5	Comparison	338

8.6 Notes and Remarks	340
Appendices	341
A Reproducing Kernel Hilbert Spaces of Sobolev Type	341
A.1 Korobov Spaces	341
A.1.1 Weighted Korobov Spaces	347
A.2 Sobolev Spaces	350
A.2.1 The First Weighted Sobolev Space	350
A.2.2 The Second Weighted Sobolev Space	353
A.2.3 The Third Weighted Sobolev Space	355
B Gaussian Measures	357
B.1 Gaussian Measures on Banach Spaces	357
B.2 Gaussian Measures and Reproducing Kernel Hilbert Spaces	361
C List of Open Problems	363
Bibliography	365
Index	381
