Foreword.....	v
Introduction .....	1
<b>Part I. Minkowski, Hilbert and Funk geometries</b>	
Chapter 1. Weak Minkowski spaces <i>by Athanase Papadopoulos and Marc Troyanov</i> .....	11
Chapter 2. From Funk to Hilbert geometry <i>by Athanase Papadopoulos and Marc Troyanov</i> .....	33
Chapter 3. Funk and Hilbert geometries from the Finslerian viewpoint <i>by Marc Troyanov</i> .....	69
Chapter 4. On the Hilbert geometry of convex polytopes <i>by Constantin Vernicos</i> .....	111
Chapter 5. The horofunction boundary and isometry group of the Hilbert geometry <i>by Cormac Walsh</i> .....	127
Chapter 6. Characterizations of hyperbolic geometry among Hilbert geometries <i>by Ren Guo</i> .....	147
<b>Part II. Groups and dynamics in Hilbert geometry</b>	
Chapter 7. The geodesic flow of Finsler and Hilbert geometries <i>by Mickaël Crampon</i> .....	161
Chapter 8. Around groups in Hilbert geometry <i>by Ludovic Marquis</i> .....	207

Chapter 9. Dynamics of Hilbert nonexpansive maps <i>by Anders Karlsson</i> .....	263
Chapter 10. Birkhoff's version of Hilbert's metric and its applications in analysis <i>by Bas Lemmens and Roger Nussbaum</i> .....	275
<b>Part III. Developments and applications</b>	
Chapter 11. Convex real projective structures and Hilbert metrics <i>by In Kang Kim and Athanase Papadopoulos</i> .....	307
Chapter 12. Weil–Petersson Funk metric on Teichmüller space <i>by Hideki Miyachi, Ken'ichi Ohshika and Sumio Yamada</i> .....	339
Chapter 13. Funk and Hilbert geometries in spaces of constant curvature <i>by Athanase Papadopoulos and Sumio Yamada</i> .....	353
<b>Part IV. History of the subject</b>	
Chapter 14. On the origin of Hilbert geometry <i>by Marc Troyanov</i> .....	383
Chapter 15. Hilbert's fourth problem <i>by Athanase Papadopoulos</i> .....	391
Open problems .....	433
List of Contributors .....	443
Index .....	445
