

## CONTENTS

Preface .....	v
6 ECM Committees .....	xi
6 ECM Sponsors .....	xiii
Opening Ceremony .....	xv
The Prize Winners .....	xxi
List of events .....	xxvi
Closing Ceremony .....	xxx
Participants, lectures and speakers .....	xxxix

### PLENARY LECTURES

<i>Adrian Constantin</i> Some mathematical aspects of water waves .....	1
<i>Camillo De Lellis, László Székelyhidi</i> Continuous dissipative Euler flows and a conjecture of Onsager .....	13
<i>Herbert Edelsbrunner, Dmitriy Morozov</i> Persistent Homology: Theory and Practice .....	31
<i>Mikhail Gromov</i> In a Search for a Structure, Part 1: On Entropy .....	51
<i>Christopher Hacon</i> Classification of Algebraic Varieties .....	79
<i>Alexander Braverman, David Kazhdan</i> Representations of affine Kac–Moody groups over local and global fields: a survey of some recent results .....	91
<i>Sylvia Serfaty</i> Emergence of the Abrikosov lattice in several models with two dimensional Coulomb interaction .....	119
<i>Saharon Shelah</i> Dependent Classes, E72 .....	137
<i>Michel Talagrand</i> Chaining and the Geometry of Stochastic Processes .....	159

### INVITED LECTURES

<i>Anton Alekseev</i> Duflo isomorphism, the Kashiwara–Vergne conjecture and Drinfeld associators .....	179
<i>Jean Bertoin</i> Coagulation with limited aggregations .....	195

<i>Serge Cantat</i>	
The Cremona group in two variables .....	211
<i>Vicent Caselles</i>	
Variational models for image inpainting .....	227
<i>Alessandra Celletti</i>	
KAM theory and its applications: from conservative to dissipative systems .....	243
<i>Pierre Colmez</i>	
Le programme de Langlands $p$ -adique .....	259
<i>Alessio Corti</i>	
Mirror Symmetry and Fano Manifolds .....	285
<i>Hélène Esnault</i>	
On flat bundles in characteristic 0 and $p > 0$ .....	301
<i>Alexander A. Gaifullin</i>	
Combinatorial realisation of cycles and small covers .....	315
<i>Isabelle Gallagher</i>	
Remarks on the global regularity for solutions to the incompressible Navier–Stokes equations .....	331
<i>Olle Häggström</i>	
Why the Empirical Sciences Need Statistics So Desperately .....	347
<i>Arieh Iserles</i>	
Computing the Schrödinger equation with no fear of commutators .....	361
<i>Alexander S. Kechris</i>	
Dynamics of non-archimedean Polish groups .....	375
<i>Bernhard Keller</i>	
Cluster algebras and cluster monomials .....	399
<i>Sławomir Kołodziej</i>	
Weak solutions to the complex Monge–Ampère equation .....	415
<i>Gady Kozma</i>	
Reinforced random walk .....	429
<i>Frank Merle</i>	
On blow-up curves for semilinear wave equations .....	445
<i>Andrey E. Mironov</i>	
Commuting higher rank ordinary differential operators .....	459
<i>David Nualart</i>	
Stochastic calculus with respect to the fractional Brownian motion .....	475
<i>Alexander Olevskii</i>	
Sampling, Interpolation, Translates .....	489
<i>Leonid Parnowski</i>	
Multidimensional periodic and almost-periodic spectral problems .....	503

<i>Benjamin Schlein</i>	
Effective equations for quantum dynamics .....	515
<i>Piotr Śniady</i>	
Combinatorics of asymptotic representation theory .....	531
<i>Hao Jia, Vladimír Šveřák</i>	
On scale-invariant solutions of the Navier–Stokes equations.....	547
<i>Stevo Todorčević</i>	
Ramsey-theoretic analysis of the conditional structure of weakly-null sequences .....	555

#### PRIZE WINNERS' LECTURES

<i>Simon Brendle</i>	
Uniqueness results for minimal surfaces and constant mean curvature surfaces in Riemannian manifolds .....	573
<i>Alessio Figalli</i>	
Stability in geometric and functional inequalities.....	585
<i>Adrian Ioana</i>	
Classification and rigidity for von Neumann algebras.....	601
<i>Mathieu Lewin</i>	
A nonlinear variational problem in relativistic quantum mechanics ....	627
<i>Ciprian Manolescu</i>	
Grid Diagrams in Heegaard Floer Theory.....	643
<i>Gregory Miermont</i>	
Random maps and continuum random 2-dimensional geometries .....	659
<i>Tom Sanders</i>	
Approximate (Abelian) groups.....	675
<i>Corinna Ulcigrai</i>	
Shearing and mixing in parabolic flows .....	691
<i>Emmanuel Trelat</i>	
Optimal control theory and some applications to aerospace problems ..	707
<i>Jan P. Hogendijk</i>	
Mathematics and geometric ornamentation in the medieval Islamic world .....	727

#### SPECIAL LECTURES

<i>José Francisco Rodrigues</i>	
Some mathematical aspects of the Planet Earth.....	743
<i>Philip Welch</i>	
Turing's Mathematical Work .....	763
<i>Artur Siemaszko and Maciej P. Wojtkowski</i>	
Counting Berg partitions via Sturmian words and substitution tilings .	779
