Contents

PrefaceV
The 33rd SPA Conference 2009ix
Plenary Lecturesxii
Committees of the Conferencexiv
List of Donorsxv
Optimal switching, systems of reflected BSDEs and systems of variational inequalities with inter-connected obstacles
by Saïd Hamadène
The COGARCH: a review, with news on option pricing and statistical inference by Claudia Klüppelberg, Ross Maller and Alexander Szimayer
Some properties of quasi-stationary distributions for finite Markov chains by Servet Martínez and Jaime San Martín
The parabolic Anderson model with heavy-tailed potential by Peter Mörters
From exploration paths to mass excursions – variations on a theme of Ray and Knight
by Etienne Pardoux and Anton Wakolbinger87
Gaussian approximation of functionals: Malliavin calculus and Stein's method by Gesine Reinert
Merging and stability for time inhomogeneous finite Markov chains by Laurent Saloff-Coste and Jessica Zúñiga
Some mathematical aspects of market impact modeling by Alexander Schied and Alla Slynko
The self-avoiding walk: A brief survey by Gordon Slade

viii Contents

L^p -independence of growth bounds of Feynman–Kac semigroups	
by Masayoshi Takeda	201
Some recent progress on functional inequalities and applications	
by Feng-Yu Wang	227
List of Contributors	247
