## **EMS Monographs in Mathematics**

Edited by Hugo Duminil-Copin (Université de Genève and Institut des Hautes Études Scientifiques), Gavril Farkas (Humboldt-Universität zu Berlin), Isabelle Gallagher (École normale supérieure de Paris and Université de Paris), and Paul Seidel (Massachusetts Institute of Technology)

The *EMS Monographs in Mathematics* is a book series aimed at mathematicians and scientists. It publishes research monographs from all fields of mathematics. The individual volumes are intended to give a comprehensive and self-contained account of their particular subject. They present mathematical results that are new or have not been accessible previously in the literature.

Previously published in this series:

- R. Arratia, A.D. Barbour, S. Tavaré, *Logarithmic Combinatorial Structures: A Probabilistic Approach*  
D. Christodoulou, *The Formation of Shocks in 3-Dimensional Fluids*  
S. Buyalo, V. Schroeder, *Elements of Asymptotic Geometry*  
D. Christodoulou, *The Formation of Black Holes in General Relativity*  
J. Krieger, W. Schlag, *Concentration Compactness for Critical Wave Maps*
