Nina Nikolaevna Uraltseva: A journey of lifelong achievements in mathematics	vii
1 Introduction	vii
2 Mathematical contributions	ix
List of publications of Nina Nikolaevna Uraltseva	xv
Contents	xxix
1 Scalar minimizers with maximal singular sets and lack of Meyers property	1
<i>by Anna Balci, Lars Diening, and Mikhail Surnachev</i>	
1 Introduction	1
2 Definitions and auxiliary results	5
3 General examples framework	11
4 Irregularity of minimizers: Subdimensional case	15
5 Subdimensional models	22
6 Irregularity of minimizers: Superdimensional case	29
7 Superdimensional models	33
8 Comparison with the approach of [5]	38
9 Relation with the Lavrentiev gap	39
References	41
2 An implicit two-phase obstacle-type problem for the p-Laplacian with the fractional gradient	45
<i>by Pedro Miguel Campos and José Francisco Rodrigues</i>	
1 Introduction	45
2 Preliminaries	48
3 Characterization of the solution to the two-phase problem	51
4 Stability of solutions as $s \nearrow 1$	57
5 Existence of solutions to the quasi-variational two-phase problem	60
References	64
3 Sobolev regularity of the stress-field in nonlinear elliptic problems	67
<i>by Andrea Cianchi and Vladimir Maz'ya</i>	
1 Introduction	67
2 The p -Laplace equation	69
3 More general structures	76

4	Systems	80
	References	84
4	Planar loops with prescribed curvature via Hardy's inequality	89
	<i>by Gabriele Cora and Roberta Musina</i>	
1	Introduction	89
2	The Hardy inequality and the quantity N_H	92
3	Area functionals	96
4	The energy functional and proof of Theorem 1.1	100
A	Appendix: Final remarks	106
	References	108
5	Regularity near the fixed boundary for transmission systems	111
	<i>by Alessio Figalli, Somayeh Khademloo, Sunghan Kim, and Henrik Shahgholian</i>	
1	Introduction	111
2	Reduction to the flat boundary case	113
3	BMO-type estimate	114
4	Decay of the density	116
5	Proof of Theorem 1.1	118
	References	121
6	Measure-based approach to mesoscopic modeling of optimal transportation networks	123
	<i>by Jan Haskovec, Peter Markowich, and Simone Portaro</i>	
1	Introduction	123
2	Discrete model	126
3	Mesoscopic model and Wasserstein gradient flow	128
4	Stationary solutions	148
5	Fisher–Rao gradient flow	156
	References	165
7	On the first bifurcation of solitary waves	169
	<i>by Vladimir Kozlov</i>	
1	Introduction	169
2	Uniform stream solution, dispersion equation, the Bernoulli and Froude constants	174
3	Proof of Proposition 1.3	181
4	Spectral problems	182
5	Positivity of $\mu_1(t)$ for small t	188

6	Proofs of Theorem 1.5 and Proposition 1.7	196
	References	199
8	On parabolic equations in Sobolev spaces with lower-order coefficients from Morrey spaces	201
	<i>by Nicolai V. Krylov</i>	
1	Introduction	201
2	Main results	203
3	Preliminary estimates	205
4	Proof of Theorem 2.4	216
	References	217
9	Bifurcation for the Lotka–Volterra competition model	219
	<i>by Zaizheng Li and Susanna Terracini</i>	
1	Introduction and main results	219
2	Proof of Theorem 1.1	224
3	Global bifurcation	230
4	Limiting configuration	232
A	Appendix	238
	References	245
10	Interface behavior for the solutions of a mass conserving free boundary problem modelling cell polarization	249
	<i>by Anna Logioti, Barbara Niethammer, Matthias Röger, and Juan J. L. Velázquez</i>	
1	Introduction	249
2	Global continuity result for axisymmetric solutions	253
3	An oscillatory solution to the classical parabolic obstacle problem	260
4	Oscillatory solutions for a nonlocal obstacle problem on the real line	269
	References	274
11	On self-similar solutions of a multi-phase Stefan problem	275
	<i>by Evgeny Yu. Panov</i>	
1	Stefan problem. One-dimensional case	275
2	Multidimensional Stefan problem	281
	References	289
12	Homogenization of nonlocal convolution-type operators: An approximation for the resolvent with corrector	291
	<i>by Andrey Piatnitski, Vladimir Sloushch, Tatiana Suslina, and Elena Zhizhina</i>	

1	Introduction	291
2	Nonlocal convolution-type operator: Direct integral decomposition and estimates	296
3	Threshold characteristics of nonlocal convolution-type operator near the lower edge of the spectrum	302
4	Approximation for the resolvent $(\mathbb{A} + \varepsilon^2 I)^{-1}$	316
5	Homogenization of nonlocal convolution-type operator	324
A	Appendix: Boundedness of the solutions of the auxiliary problems	327
	References	335
13	A singular perturbation approach to the Dirichlet-area minimisation problem	337
	<i>by Anthony Salib and Georg S. Weiss</i>	
1	Introduction	337
2	Preliminaries and main results	338
3	Γ -convergence	340
4	Proof of Theorem 2.4	347
	References	353
	List of contributors	355
